Watkins, 2007-01-01 An in depth theoretical discussion of the two most important classes of algorithms for solving matrix eigenvalue problems *The Autonomy of Normativity* Singa Behrens, 2025-08-15 While the Is Ought Gap has recently been a topic of growing interest most contributions are firmly fixed on logical often quite technical accounts of the autonomy thesis This book defends two complementary autonomy theses a modal and ground based thesis that provide a deeper and more comprehensive understanding of the nature of normativity The autonomy thesis is often motivated by claims about the nature of the normative domain and its categorical difference from the non normative domain This book develops two novel interpretations of the autonomy thesis one based on the notion of grounding and the other based on a notion of logical semantic entailment developed within a framework of truthmaker semantics Together these accounts capture best the informal idea that we cannot get something normative from the non normative The proposal is based on an analysis of what it means to say that certain propositional content parts are relevant to the instantiation of entailment and grounding relations Moreover the book relates the autonomy debate to other important metaethical debates and it offers a more explicit account of the theoretical commitments of an autonomist position Finally it develops simple and elegant formal equivalents of the proposed autonomy theses which facilitate the evaluation of structurally complex proposed counterexamples which have impeded a substantive autonomy debate The Autonomy of Normativity will appeal to researchers and graduate students working in metaethics metaphysics and philosophical logic The Open Access version of this book available at [www.taylorfrancis.com](http://www.taylorfrancis.com) has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 International license Funded by the Deutsche Forschungsgemeinschaft German Research Council through the Emmy Noether Grant on Relevance KR 4516 2 1 the European Research Council ERC Grant 101040439 REASONS F1RST and the Library of Bielefeld University Modality, Morality and Belief Walter Sinnott-Armstrong, Diana Raffman, Nicholas Asher, 1995-01-27 Modality morality and belief are among the most controversial topics in philosophy today and few philosophers have shaped these debates as deeply as Ruth Barcan Marcus Inspired by her

work a distinguished group of philosophers explore these issues refine and sharpen arguments and develop new positions on such topics as possible worlds moral dilemmas essentialism and the explanation of actions by beliefs This state of the art collection honors one of the most rigorous and iconoclastic of philosophical pioneers **Euclid revised, books i and ii, with additional propositions and exercises, ed. by R.C.J. Nixon** Euclides,1886 **An Arithmetic Riemann-Roch Theorem for Singular Arithmetic Surfaces** Wayne Aitken,1996 The following gives a development of Arakelov theory general enough to handle not only regular arithmetic surfaces but also a large class of arithmetic surfaces whose generic fiber has singularities This development culminates in an arithmetic Riemann Roch theorem for such arithmetic surfaces The first part of the memoir gives a treatment of Deligne's functorial intersection theory and the second develops a class of intersection functions for singular curves which behaves analogously to the canonical Green's functions introduced by Arakelov for smooth curves **Steenrod Squares in Spectral Sequences** William M. Singer,2006 This book develops a general theory of Steenrod operations in spectral sequences It gives special attention to the change of rings spectral sequence for the cohomology of an extension of Hopf algebras and to the Eilenberg Moore spectral sequence for the cohomology of classifying spaces and homotopy orbit spaces In treating the change of rings spectral sequence the book develops from scratch the necessary properties of extensions of Hopf algebras and constructs the spectral sequence in a form particularly suited to the introduction of Steenrod squares The resulting theory can be used effectively for the computation of the cohomology rings of groups and Hopf algebras and of the Steenrod algebra in particular and so should play a useful role in stable homotopy theory Similarly the book offers a self contained construction of the Eilenberg Moore spectral sequence in a form suitable for the introduction of Steenrod operations The corresponding theory is an effective tool for the computation of the
