Fundamentals of Atmospheric Radiation Craig F. Bohren,Eugene E. Clothiaux,2006-08-21 Meeting the need for teaching material suitable for students of atmospheric science and courses on atmospheric radiation this textbook covers the fundamentals of emission absorption and scattering of electromagnetic radiation from ultraviolet to infrared and beyond Much of the contents applies to planetary atmosphere with graded discussions providing a thorough treatment of subjects including single scattering by particles at different levels of complexity The discussion of the simple multiple scattering theory introduces concepts in more advanced theories such that the more complicated two stream theory allows readers to progress beyond the pile of plates theory The authors are physicists teaching at the largest meteorology department in the US at Penn State The problems given in the text come from students colleagues and correspondents and the figures designed especially for this book facilitate comprehension Ideal for advanced undergraduate and graduate students of atmospheric science Free solutions manual available for lecturers at www.wiley-vch.de/supplements

Color and Light in Nature David K. Lynch,William Charles Livingston,2001-06-11 We live in a world of optical marvels from the commonplace but beautiful rainbow to the rare and eerie superior mirage But how many of us really understand how a rainbow is formed why the setting sun is red and flattened or even why the sky at night is not absolutely black This beautiful and informative guide provides clear explanations to all naturally occurring optical phenomena seen with the naked eye including shadows halos water optics mirages and a host of other spectacles Separating myth from reality it outlines the basic principles involved and supports them with many figures and references A wealth of rare and spectacular photographs many in full color illustrate the phenomena throughout In this new edition of the highly acclaimed guide to seeing photographing and understanding nature s optical delights the authors have added over 50 new images and provided new material on experiments you can try yourself

Light and Color in the Outdoors Marcel Minnaert,2012-12-06 All of science springs from the observation of nature In this classic book the late Marcel Minnaert accompanies the reader on a tour of nature s light and color and reveals the myriad phenomena that may be observed outdoors with no more than a pair of sharp eyes and an enquiring mind From the intriguing shape of the dapples beneath a tree on a sunny day to rainbows mirages and haloes to the colors of liquid ice and the sky to the appearance of the sun moon planets and stars Minnaert describes and explains them all in clear language accessible to the layman This volume includes 80 new photographs over half in color illustrating many of the phenomena

ordinary and exotic discussed in the book Most of the new photos are by Pekka Parviainen the renowned Finnish nature photographer

Light as Experience and Imagination from Paleolithic to Roman Times David S. Herrstrom, 2017-09-26 This book is an interdisciplinary synthesis and interpretation about the experience of light as revealed in a wide range of art and literature from Paleolithic to Roman times Humanistic in spirit and in its handling of facts it marshals a substantial body of scholarship to develop an explication of light as a central even dramatic reality of human existence and experience in diverse cultural settings David S Herrstrom underscores our intimacy with light not only its constant presence in our life but its insinuating character Focusing on our encounters with light and ways of making sense of these this book is concerned with the personal and cultural impact of light exploring our resistance to and acceptance of light Its approach is unique The book's true subject is the individual's relationship with light rather than the investigation of light's essential nature It tells the story of light seducing individuals down through the ages Consequently it is not concerned with the progress of scientific inquiries into the physical properties and behavior of light optical science but rather with subjective reactions to it as reflected in art Paleolithic through Roman architecture Egyptian Grecian Roman mythology and religion Paleolithic Egyptian and literature e.g. Akhenaten Plato Aeschylus Lucretius John the Evangelist Plotinus and Augustine This book celebrates the complexity of our relation to light's character No individual experience of light is truer than any other none improves on any previous experience of light's tidal pull on us And the wondrous variety of these encounters has yielded a richly layered tapestry of human experience By its broad scope and interdisciplinary approach this pioneering book is without precedent

The Principles of Psychology William James, 1918

Polarised Light in Science and Nature J. David Pye, 2015-05-06 This book describes a number of simple methods for showing that light is polarised and determining the direction of vibration It is based on a demonstration lecture called Polar Explorations in Light developed for young audiences at the Royal Institution of Great Britain

Light and

Color in the Outdoors Marcel Minnaert, 1995-04-13 All of science springs from the observation of nature In this classic book the late Professor Minnaert accompanies the reader on a tour of nature's light and color and reveals the myriad phenomena that may be observed outdoors with no more than a pair of eyes and an enquiring mind From the intriguing shape of the dapples beneath a tree on a sunny day via rainbows mirages and haloes the colors of liquid ice and the sky to the appearance of the sun moon planets and stars Minnaert describes and explains them all in a clear language accessible to laymen This new English edition is supplemented by 80 plates over half of them in color taken by the acclaimed photographer Pekka Parviainen illustrating many of the phenomena ordinary and exotic discussed in the book **James Turrell** Craig E. Adcock, James Turrell, 1990-01-01 A much needed antidote to Art Writing as it is encountered in the art mags his writing is fluent and the style attractive and engaging Stephen Foster University of Iowa *The Principles of Psychology* William James, 1918 **Revival: Philosophy and the Physicists (1937)** Lizzie Susan Stebbing, 2018-05-08 This book is written by a philosopher for other philosophers and for that section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment We common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories nor to decide what precisely are their implications We are dependent upon the scientists for an exposition of those developments which so we find them proclaiming have important and far reaching consequences for philosophy Unfortunately however our popular expositors do not always serve us very well The two who are most widely read in this country are Sir Arthur Eddington and Sir James Jeans They are not always reliable guides Their influence has been considerable upon the reading public upon theologians and upon preachers they have even misled philosopher who should have known better Accordingly it has seemed to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based How Can You Tell If a Spider Is Dead? And More Moments of Science Don Glass, 1996-10-22 Have a minute That's long enough to learn about rust quicksand tiny bubbles or creaking snow Or the shape of lightening bolts how dogs eat why it's hard to burn one log or what our pupils tell us This is a book to reawaken your childhood sense of curiosity It's a feast of unusual facts and intriguing information for people with lots of curiosity but only a moment to spare There is something to discover on every page from what Jello is made of to why you can't heat an ice cube presented in a concise and entertaining way These easy to understand science stories are sure to delight the curious child in all of us A sequel to the popular *Why You Can Never Get to the End of the Rainbow and Other Moments of Science* also available from Indiana University Press **Everyday Physics: Waves - From Sounds And Light To Tsunamis And Gravitation** Michel A Van Hove, 2024-01-10 This book aims to popularize physics by emphasizing conceptual ideas of physics and their interconnections while avoiding mathematics entirely The approach is to explore intriguing topics of daily relevance by asking and discussing questions thereby the reader can participate in developing answers which enables a deeper

understanding than is achievable with memorization The topic of this book waves is chosen because we experience waves in many forms every minute of our lives from sound waves and light waves to quantum waves and brain waves The target readership of this book is very broad all those with a curious mind about nature and with a desire to understand how nature works especially laymen youngsters secondary school children and their teachers **The Continuum and other types of serial order** E.V. Huntington, **Introduction to Light** Gary Waldman,2002-01-01 Designed for a nonmathematical undergraduate optics course addressed to art majors this four part treatment discusses the nature and manipulation of light vision and color Questions at the end of each chapter help test comprehension of material which is almost completely presented in a nonmathematical manner 170 black and white illustrations 1983 edition **The Ever-Changing Sky** James B. Kaler,2002-03-14 The Ever Changing Sky provides a comprehensive and non mathematical guide to spherical astronomy The reader is guided through terrestrial and celestial co ordinate systems time measurement and celestial navigation to the prediction of the rising and setting of the stars Sun and Moon It focuses on the geometrical aspects of the night sky without using complex trigonometry The book progresses to a general study of the Earth and sky including the stars and constellations with useful star maps provided the motions and appearance of the Moon tides and eclipses the orbits of the planets and the smaller bodies of the Solar System asteroids meteors meteorites and comets Finally there is a brief overview of atmospheric phenomena including rainbows and haloes This text will be invaluable to students taking courses in naked eye astronomy amateur and professional astronomers as well as more general readers wanting to know how the night sky changes
