

ZENITH STARS

If a star has the same declination as your latitude, it will be a zenith star and culminate directly overhead.

But for every degree difference between declination and latitude, it will culminate 1 degree lower in the sky. For example, from the equator Arcturus will culminate at an altitude of 71 degrees, because there is 19 degrees difference between your latitude and its declination, so $90 - 19 = 71$.

Zenith Xbr7user Guide
