Foundations of Biogeography

Mark V. Lomolino, Dov F. Sax, James H. Brown, 2004-07 *Foundations of Biogeography* provides facsimile reprints of seventy-two works that have proven fundamental to the development of the field. From classics by Georges Louis LeClerc, Comte de Buffon, Alexander von Humboldt, and Charles Darwin to equally seminal contributions by Ernst Mayr, Robert MacArthur, and E. O. Wilson, these papers and book excerpts not only reveal biogeography's historical roots but also trace its theoretical and empirical development. Selected and introduced by leading biogeographers, the articles cover a wide variety of taxonomic groups, habitat types, and geographic regions. *Foundations of Biogeography* will be an ideal introduction to the field for beginning students and an essential reference for established scholars of biogeography, ecology, and evolution. On Solid Ground illustrates what geologists know about the earth by telling the stories of the people who made major geological discoveries. It also chronicles the doubters and nay-sayers who have worked so hard to undermine our understanding of the earth. Each chapter of this book contains three things: the human story of a geologic controversy, an explanation of why geologists are so sure about the right answer to that controversy, and a short discussion of the logical fallacies being used by those still unwilling to accept
