Copyright Office, 1978 **Spirit of the Totem** Irena Maryniak, 1995 The book presents an original interdisciplinary analysis of religious and mythological perspectives in fiction published in the Soviet Union between the mid 1960s and the mid 1980s In doing so it points to ways in which anthropological theory can be used as a framework for literary criticism It also shows how in the two decades before perestroika religion and mythology served as alternative models for the intellectual and political reorientation of Soviet society Selected works are explored with reference to a formative debate in anthropological studies on the nature and development of religion based on Edward B Tylor s theory of animism and Emile Durkheim s theory of totemism It is shown how the animist totemist dichotomy highlighted by the controversy is reflected in Russian religious thought before 1917 and particularly in the literature of the Soviet era Within the framework of this debate a selection of novels is discussed in the light of a range of mythological and religious systems Attention is drawn to the connection between Valentin Rasputin s religious vision and traditional Siberian beliefs particularly those of the Buryat The Georgian novel *Data Tutashkia* by Chabua Amiredzhibi is analysed with reference to Zoroastrian thought Daniil Granin s *Kartina* The Picture serves as an example of a

work where in accordance with Tylor's theory notions of art and beauty take on an animist quality. It is argued that early fiction by Chingiz Aitmatov reveals a tension between animist perceptions and the totemic understanding of religion and mirrors aspects of pre-Islamic Central Asian religious tradition. The writing of Vladimir Tendriakov offers an example of a vision divided between an awareness of Christian dilemmas and loyalty to Marxist-Leninist sociological models. The study also shows how Durkheim's theory of religion as an expression of a group's awareness of its identity can be related to ideas put forward by Russian nationalist writers Iurii Bondarev, Sergei Alekseev, and Vasilii Belov. It suggests that examples of fiction by Petr Proskurin and later works by Chingiz Aitmatov and Vladimir Tendriakov indicate revived interest in the God-building theory of Maksim Gor'kii and Anatolii Lunacharskii. In conclusion, the book argues that subtextual religious and mythological narratives in Soviet fiction published in the years between the fall of Khrushchev and the Millennium of Christianity in Russia provided a model for new literary discourse under perestroika and for subsequent political transformations. **Applied**

Mechanics Reviews, 1973 Stability and Control of Conventional and Unconventional Aerospace Vehicle Configurations Bernd Chudoba, 2019-07-23. This book introduces a stability and control methodology named AeroMech capable of sizing the primary control effectors of fixed-wing subsonic to hypersonic designs of conventional and unconventional configuration layout. Control power demands are harmonized with static dynamic and maneuver stability requirements while taking the six-degree-of-freedom trim state into account. The stability and control analysis solves the static and dynamic equations of motion combined with non-linear vortex lattice aerodynamics for analysis. The true complexity of addressing subsonic to hypersonic vehicle stability and control during the conceptual design phase is hidden in the objective to develop a generic vehicle configuration-independent methodology concept. The inclusion of geometrically asymmetric aircraft layouts in addition to the reasonably well-known symmetric aircraft types contributes significantly to the overall technical complexity and level of abstraction. The first three chapters describe the preparatory work invested along with the research strategy devised thereby placing strong emphasis on systematic and thorough knowledge utilization. The engineering scientific method itself is derived throughout the second half of the book. This book offers a unique aerospace vehicle configuration-independent generic methodology and mathematical algorithm. The approach satisfies the initial technical quest: How to develop a configuration stability control methodology module for an advanced multi-disciplinary aerospace vehicle design synthesis environment that permits consistent aerospace vehicle design evaluations. **Current Catalog** National Library of Medicine (U.S.), 1992

Companion to Twentieth and Early Twenty First Century Urban Design is a fully illustrated descriptive and explanatory history of the development of urban design ideas and paradigms of the past 150 years The ideas and projects hypothetical and built range in scale from the city to the urban block level The focus is on where the generic ideas originated the projects that were designed following their precepts the functions they address and or afford and what we can learn from them The morphology of a city its built environment evolves unselfconsciously as private and governmental investors self consciously erect buildings and infrastructure in a pragmatic piecemeal manner to meet their own ends Philosophers novelists architects and social scientists have produced myriad ideas about the nature of the built environment that they consider to be superior to those forms resulting from a laissez faire attitude to urban development Rationalist theorists dream of ideal futures based on assumptions about what is good empiricists draw inspirations from what they perceive to be working well in existing situations Both groups have presented their advocacies in manifestoes and often in the form of generic solutions or illustrative designs This book traces the history of these ideas and will become a standard reference for scholars and students interested in the history of urban spaces including architects planners urban historians urban geographers and urban morphologists
