Knösche, Jens Haueisen, 2022-10-01 This textbook provides a comprehensive and didactic introduction from the basics to the current state of the art in the field of EEG MEG source reconstruction Reconstructing the generators or sources of electroencephalographic and magnetoencephalographic EEG MEG signals is an important problem in basic neuroscience as well as clinical research and practice Over the past few decades an entire theory together with a whole collection of algorithms and techniques has developed In this textbook the authors provide a unified perspective on a broad range of EEG MEG source reconstruction methods with particular emphasis on their respective assumptions about sources data head tissues and sensor properties An introductory chapter highlights the concept of brain imaging and the particular importance of the neuroelectromagnetic inverse problem This is followed by an in depth discussion of neural information processing and brain signal generation and an introduction to the practice of data acquisition Next the relevant mathematical models for the sources of EEG and MEG are discussed in detail followed by the neuroelectromagnetic forward problem that is the prediction of EEG or MEG signals

from those source models using biophysical descriptions of the head tissues and the sensors The main part of this textbook is dedicated to the source reconstruction methods The authors present a theoretical framework of the neuroelectromagnetic inverse problem centered on Bayes theorem which then serves as the basis for a detailed description of a large variety of techniques including dipole fit methods distributed source reconstruction spatial filters and dynamic source reconstruction methods The final two chapters address the important topic of assessment including verification and validation of source reconstruction methods and their actual application to real world scientific and clinical questions This book is intended as basic reading for anybody who is engaged with EEG MEG source reconstruction be it as a method developer or as a user including advanced undergraduate students PhD students and postdocs in neuroscience biomedical engineering and related fields *Chemical News and Journal of Industrial Science* ,1910 Key-words-in-context Title Index ,1963 **The**
