Stat Labs Deborah Nolan, Terry P. Speed, 2006-05-02 Integrating the theory and practice of statistics through a series of case studies each lab introduces a problem provides some scientific background suggests investigations for the data and provides a summary of the theory used in each case Aimed at upper division students *A Course in Statistics with R* Prabhanjan N. Tattar, Suresh Ramaiah, B. G. Manjunath, 2016-03-15 Integrates the theory and applications of statistics using R A Course in Statistics with R has been written to bridge the gap between theory and applications and explain how mathematical expressions are converted into R programs The book has been primarily designed as a useful companion for a Masters student during each semester of the course but will also help applied statisticians in revisiting the underpinnings of the subject With this dual goal in mind the book begins with R basics and quickly covers visualization and exploratory analysis Probability and statistical inference inclusive of classical nonparametric and Bayesian schools is developed with definitions motivations mathematical expression and R programs in a way which will help the reader to understand the mathematical development as well as R implementation Linear regression models experimental designs multivariate analysis and categorical data analysis are treated in a way which makes effective use of visualization techniques and the related statistical techniques underlying them through practical applications and hence helps the reader to achieve a clear understanding of the associated statistical models Key features Integrates R basics with statistical concepts Provides graphical presentations inclusive of mathematical expressions Aids understanding of limit theorems of probability with and without the simulation approach Presents detailed algorithmic development of statistical models from scratch Includes practical applications with over 50 data sets *Stat Labs* Deborah Ann Nolan, 2000 *Teaching Statistics* Andrew Gelman, Deborah Nolan, 2002-08-08 Students in the sciences economics psychology social sciences and medicine take introductory statistics Statistics is increasingly offered at the high school level as well However statistics can be notoriously difficult to teach as it is seen by many students as difficult and boring if not irrelevant to their subject of choice To help dispel these misconceptions Gelman and Nolan have put together this fascinating and thought provoking book Based on years of teaching experience the book provides a wealth of demonstrations examples and projects that involve active student participation Part I of the book presents a large selection of activities for introductory statistics courses and combines chapters such as First week of class with exercises to break the ice and get students talking then Descriptive statistics collecting and displaying data then follows the traditional topics linear regression data collection probability and inference Part II gives tips on what does and what doesn't work in class how to set up effective demonstrations and examples how to encourage students to participate in class and work effectively in group projects A sample course plan is provided Part III presents material for more advanced courses on topics such as decision theory Bayesian statistics and sampling

**Communicating with Data** Deborah Nolan, Sara Stoudt, 2021 Communicating with Data aims to help students and

researchers write about their insights in a way that is both compelling and faithful to the data Randomistas Andrew Leigh, 2018-07-24 A fascinating account of how radical researchers have used experiments to overturn conventional wisdom and shaped life as we know it Experiments have consistently been used in the hard sciences but in recent decades social scientists have adopted the practice Randomized trials have been used to design policies to increase educational attainment lower crime rates elevate employment rates and improve living standards among the poor This book tells the stories of radical researchers who have used experiments to overturn conventional wisdom From finding the cure for scurvy to discovering what policies really improve literacy rates Leigh shows how randomistas have shaped life as we know it Written in a Gladwell esque style this book provides a fascinating account of key randomized control trial studies from across the globe and the challenges that randomistas have faced in getting their studies accepted and their findings implemented In telling these stories Leigh draws out key lessons learned and shows the most effective way to conduct these trials
