bones of the lower limbs are adapted for weight bearing support and stability as well as for body locomotion via walking or running In contrast our upper limbs are not required for these functions Instead our upper limbs are highly mobile and can be utilized for a wide variety of activities The large range of upper limb movements coupled with the ability to easily manipulate objects with our hands and opposable thumbs has allowed humans to construct the modern world in which we live Chapter Outline The Pectoral Girdle Bones of the Upper Limb The Pelvic Girdle and Pelvis Bones of the Lower Limb Development of the Appendicular Skeleton The Open Courses Library introduces you to the best Open Source Courses
