Selected paper from 6th International Conference on Renewable Energy Sources (ICoRES 2019) Marcin Jewiarz, 2020-11-23

Thank you for reaching for this book. It is a summary of the research presented at the 6th International Conference on Renewable Energy Sources ICoRES19 which took place in Krynica, Poland, in June 2019. This event is the most recognizable scientific meeting connected to RES in Poland. From the very beginning, this conference has been a unique occasion for gathering Polish and international researchers' perspectives on renewable energy sources and balancing them against governmental policy considerations. Accordingly, the conference has also offered panels to discuss best practices and solutions with local entrepreneurs and federal government bodies. The meeting attracts not only scientists but also industry representatives as well as local and federal government personnel. We are open to new and fresh ideas concerning renewable energy, which is why so many scientists from Central and Eastern Europe visit Krynica to discuss the Green Future of this region. In 2019, the conference was organized by the University of Agriculture in Krakow in cooperation with the AGH University of Science and Technology, Krakow, the State Agrarian and Engineering University in Podilya, the University of Ilina, the International Commission of Agricultural and Biosystems Engineering (CIGR), and the Polish Society of Agricultural Engineering. Honorary auspices were made by the Ministry of Science and Higher Education of the Republic of Poland, the rector of the University of Agriculture in Krakow, the rector of the AGH University of Science and Technology, and the rector of the State Agrarian and Engineering University in Podilya.

Principles of Sustainable Energy Frank Kreith, Susan Krumdieck, Jan F. Kreider, 2010-12-16

A transition from a fossil fuel-based economy to one that uses renewable energy has become inevitable. This transition will not only be an engineering challenge but will also be an economic and environmental one. Offering an interdisciplinary quantitative approach, *Principles of Sustainable Energy* presents a comprehensive overview of the major renewable energy technologies currently available, including biomass and biofuels, solar thermal conversion, photovoltaics, and wind energy conversion. Written by renowned expert Frank Kreith, the book emphasizes economics as well as energy return on investment analyses for each technology and integrates the need for energy conservation with the overall aspects of building a sustainable energy system with renewable sources. The author covers energy storage in depth because it is considered one of the most important and problematic requirements for building a sustainable renewable energy system. Treatments of the economics of nuclear power and options for transportation systems are also included. The book contains worked-out example problems illustrating engineering analyses from a systems perspective and problem sets to reinforce concepts and applications. Examples and
