D. Allen,1995-02 Using the Case Study Teaching Method to Promote College Students' Critical Thinking Skills ,2007 The purpose of this study was to examine general and domain specific critical thinking skills in college students particularly ways in which these skills might be increased through the use of the case study method of teaching General critical thinking skills were measured using the Watson Glaser Critical Thinking Appraisal WGCTA Short Form a forty item paper and pencil test designed to measure important abilities involved in critical thinking including inference recognition of assumptions deduction interpretation and evaluation of arguments The ability to identify claims and support those claims with evidence is also an important aspect of critical thinking I developed a new instrument the Claim and Evidence Assessment Tool CEAT to measure these skills in a domain specific manner Forty undergraduate students in a general science course for non science majors at a small two year college in the northeastern United States experienced positive changes in general critical thinking according to results obtained using the Watson Glaser Critical Thinking Appraisal WGCTA In addition the students showed cumulative improvement in their ability to identify claims and evidence as measured by the Claim and Evidence Assessment Tool CEAT Mean score on the WGCTA improved from 22 15 4 59 to 23 48 4 24 out of 40 and the mean CEAT score increased from 14 98 3 28 to 16 20 3 08 out of 24 These increases were modest but statistically and educationally significant No differences in claim and evidence identification were found between students who learned about specific biology topics using the case study method of instruction and those who were engaged in more traditional instruction and the students ability to identify claims and evidence and their factual knowledge showed little if any correlation The results of this research were inconclusive regarding whether or not the case study teaching method promotes college students general or domain specific critical thinking skills and future research addressing this issue should probably utilize larger sample sizes and a pretest posttest randomized experimental design **Teaching with Cases** Espen Anderson,Bill Schiano,2014-07-31 Case method teaching immerses students in realistic business situations which include incomplete information time constraints and conflicting goals The class discussion inherent in case teaching is well known for stimulating the development of students critical thinking skills yet instructors often need guidance on managing that class discussion to maximize learning Teaching

with Cases focuses on practical advice for instructors that can be easily implemented. It covers how to plan a course, how to teach it, and how to evaluate it. The book is organized by the three elements required for a great case-based course: 1. advance planning by the instructor, including implementation of a student contract; 2. how to make leading a vibrant case discussion easier and more systematic; and 3. planning for student evaluation after the course is complete. Teaching with Cases is ideal for anyone interested in case teaching, whether basing an entire course on cases, using cases as a supplement, or simply using discussion facilitation techniques.
