Java Development with Spring, Hibernate and Eclipse Anil Hemrajani,2006-05-09 Agile Java™ Development With

Spring Hibernate and Eclipse is a book about robust technologies and effective methods which help bring simplicity back into the world of enterprise Java development. The three key technologies covered in this book, the Spring Framework, Hibernate, and Eclipse, help reduce the complexity of enterprise Java development significantly. Furthermore, these technologies enable plain old Java objects (POJOs) to be deployed in light weight containers versus heavy handed remote objects that require heavy EJB containers. This book also extensively covers technologies such as Ant, JUnit, JSP tag libraries, and touches upon other areas such as logging, GUI based debugging, monitoring using JMX, job scheduling, emailing, and more. Also, Extreme Programming, XP, Agile, Model Driven Development (AMDD), and refactoring are methods that can expedite the software development projects by reducing the amount of up front requirements and design; hence these methods are embedded throughout the book but with just enough details and examples to not sidetrack the focus of this book. In addition, this book contains well separated subjective material, opinion sidebars, comic illustrations, tips, and tricks, all of which provide real world and practical perspectives on relevant topics. Last but not least, this book demonstrates the complete lifecycle by building and following a sample application chapter by chapter, starting from conceptualization to production, using the technology and processes covered in this book. In summary, by using the technologies and methods covered in this book, the reader will be able to effectively develop enterprise class Java applications in an agile manner.
