The Population Ecology of Interest Representation Virginia Gray, David Lowery, 1996 This examination of lobbying communities explores how interest group populations are constructed and how they influence politics and public policy By examining how populations of interest groups are comprised this work fills an important gap between existing theories of the origins of individual interest groups and studies of interest group influence The population ecology model of interest communities developed here builds on insights first developed in population biology and later employed by organizational ecologists The model s central premise is that it is the environmental forces confronting interest organizations that most

directly shape the contours of interest populations After examining the demography of interest organizations in the fifty American states the population ecology model is used to account for variations in the density and diversity of their interest communities the nature of competition among similar interest organizations to establish viable niches and the impact of alternative configurations of interest communities on the legislative process and the policies it produces These empirical findings suggest that the environment of interest communities is highly constraining limiting their size composition and potential impact on politics Virginia Gray is Professor of Political Science University of Minnesota David Lowery is Burton Craige Professor of Political Science University of North Carolina at Chapel Hill

Understanding Educational Statistics Using Microsoft Excel and SPSS Martin Lee Abbott, 2014-08-21 Utilizing the latest software this book presents the essential statistical procedures for drawing valuable results from data in the social sciences Mobilizing interesting real world examples from the field of education Understanding Educational Statistics Using Microsoft Excel and SPSS supplies a seamless presentation that identifies valuable connections between statistical applications and research design Class tested to ensure an accessible presentation the book combines clear step by step explanations and the use of software packages that are accessible to both the novice and professional alike to present the fundamental statistical practices for organizing understanding and drawing conclusions from educational research data The book begins with an introduction to descriptive and inferential statistics and then proceeds to acquaint readers with the various functions for working with quantitative data in the Microsoft Excel environment such as spreadsheet navigation sorting and filtering and creating pivot tables Subsequent chapters treat the procedures that are commonly employed when working with data across various fields of social science research including Single sample tests Repeated measure tests Independent t tests One way ANOVA and factorial ANOVA Correlation Bivariate regression Chi square Multiple regression Individual chapters are devoted to specific procedures each ending with a lab exercise that highlights the importance of that procedure by posing a research question examining the question through its application in Excel and SPSS and concluding with a brief research report that outlines key findings drawn from the results Real world examples and data from modern educational research are used throughout the book and a related Web site features additional data sets examples and labs allowing readers to reinforce their comprehension of the material Bridging traditional statistical topics with the latest software and applications in the field of education Understanding Educational Statistics Using Microsoft Excel and SPSS is an excellent book for courses on educational research methods and introductory statistics in the social sciences at the upper undergraduate and graduate levels It also serves as a valuable resource for researchers and practitioners in the fields of education psychology and the social sciences who require a statistical background to work with data in their everyday work

Understanding Statistical Concepts Using S-plus Randall E. Schumacker, Allen Akers, 2001-03-01 Written as a supplemental text for an introductory or intermediate statistics course this book is organized along the lines of many popular statistics texts The chapters provide a good

conceptual understanding of basic statistics and include exercises that use S PLUS simulation programs Each chapter lists a set of objectives and a summary The book offers a rich insight into how probability has shaped statistical procedures in the behavioral sciences as well as a brief history behind the creation of various statistics Computational skills are kept to a minimum by including S PLUS programs that run the exercises in the chapters Students are not required to master the writing of S PLUS programs but explanations of how the programs work and program output are included in each chapter S PLUS is an advanced statistical package that has an extensive library of functions which offer flexibility in writing customized routines The S PLUS functions provide the capability of programming object and dialog windows which are commonly used in Windows software applications The S PLUS program also contains pull down menus for the statistical analysis of data A ZIP file containing programs that work in S PLUS 6.2 for use with this book is available for download from <http://www.psypress.com/resources/9780805836233.zip> please note that these scripts will only run in S PLUS 6.2 and not later versions due to changes in the programming language syntax

Statistics Explained Perry R. Hinton, 2024-10-31 Statistics Explained now in its fully revised Fourth Edition is for students and researchers who wish to understand the statistical analyses used to analyse quantitative numerical research data in a wide range of academic disciplines in particular the behavioural human and social sciences This book explains in a clear and informative manner the logic of statistical analysis in particular the null hypothesis significance testing NHST method Using this method a range of statistical tests have been devised for different types of data Each of these tests is explained in the book by adopting a step by step walkthrough approach with a specific illustrative example Crucially these explanations do not require the reader to have an advanced knowledge of mathematics or statistics but only assumes the basic mathematics which most readers will have learnt at high school The book also examines the criticisms of NHST and introduces the reader to Bayesian statistics As a result the reader will be able to critically evaluate the outcomes of statistical analysis both of their own work and that of others Statistics Explains will be of great interest to students and researchers in the behavioural human and social sciences in understanding both the outcomes of their own research and also the research reports in the academic journals
