Integrated Design and Manufacturing in Mechanical Engineering Patrick Chedmail, J.-C. Bocquet, David Davidson, 2012-12-06 This volume contains the selected papers of the first I D M M E conference on Integrated Design and Manufacturing in Mechanical Engineering held in Nantes from 15 17 April 1996 Its objective was to discuss the questions related to the definition of the optimal design and manufacturing processes and to their integration through coherent methodologies in adapted environments The initiative of the Conference and the organization thereof is mainly due to the efforts of the french PRIMECA group Pool of Computer Resources for Mechanics started eight years ago We were able to attract the international community with the support of the International Institution for Production Engineering Research C I R P The conference brought together two hundred and fifty specialists from around the world About ninety papers and twenty posters were presented covering three main topics optimization and evaluation of the product design process optimization and evaluation of the manufacturing systems and methodological aspects

Precision Metal Additive Manufacturing Richard Leach, Simone Carmignato, 2020-09-21 Additive manufacturing AM is a fast growing sector with the ability to evoke a revolution in manufacturing due to its almost unlimited design freedom and its capability to produce personalised parts locally and with efficient material use AM companies however still face technological challenges such as limited precision due to shrinkage built in stresses and limited process stability and robustness Moreover often post processing is needed due to high roughness and remaining porosity Qualified trained personnel are also in short supply In recent years there have been dramatic improvements in AM design methods process control post processing material properties and material range However if AM is going to gain a significant market share it must be developed into a true precision manufacturing method The production of precision parts relies on three principles Production is robust i.e. all sensitive parameters can be controlled Production is predictable for example the shrinkage that occurs is acceptable because it can be predicted and compensated in the design Parts are measurable as without metrology accuracy repeatability and quality assurance cannot be known AM of metals is inherently a high energy process with many

sensitive and inter related process parameters making it susceptible to thermal distortions defects and process drift The complete modelling of these processes is beyond current computational power and novel methods are needed to practicably predict performance and inform design In addition metal AM produces highly textured surfaces and complex surface features that stretch the limits of contemporary metrology With so many factors to consider there is a significant shortage of background material on how to inject precision into AM processes Shortage in such material is an important barrier for a wider uptake of advanced manufacturing technologies and a comprehensive book is thus needed This book aims to inform the reader how to improve the precision of metal AM processes by tackling the three principles of robustness predictability and metrology and by developing computer aided engineering methods that empower rather than limit AM design Richard Leach is a professor in metrology at the University of Nottingham and heads up the Manufacturing Metrology Team Prior to this position he was at the National Physical Laboratory from 1990 to 2014 His primary love is instrument building from concept to final installation and his current interests are the dimensional measurement of precision and additive manufactured structures His research themes include the measurement of surface topography the development of methods for measuring 3D structures the development of methods for controlling large surfaces to high resolution in industrial applications and the traceability of X ray computed tomography He is a leader of several professional societies and a visiting professor at Loughborough University and the Harbin Institute of Technology Simone Carmignato is a professor in manufacturing engineering at the University of Padua His main research activities are in the areas of precision manufacturing dimensional metrology and industrial computed tomography He is the author of books and hundreds of scientific papers and he is an active member of leading technical and scientific societies He has been chairman organiser and keynote speaker for several international conferences and received national and international awards including the Taylor Medal from CIRP the International Academy for Production Engineering

Henry Ford's Lean Vision William A.

Levinson,2024-11-01 Japanese manufacturers have made concepts like kaizen continuous improvement poka yoke error proofing and just in time famous When the Japanese began to adopt these techniques from the Ford Motor Company during the early twentieth century they knew exactly what they were getting proven methods for mass producing any product or delivering any service cheaply but well Henry Ford s methods however went well beyond the synergistic and mutually supporting techniques that constitute what we now call lean manufacturing They included the soft sciences the organizational psychology that makes every employee a partner in the drive for success In Henry Ford s Lean Vision William A Levinson draws from Henry Ford s writings the procedures in his factories and historical anecdotes about the birth of lean in Japan to show that the philosophy that revolutionized Japanese manufacturing was the same philosophy that grew the Ford Motor Company into a global powerhouse and made the United States the wealthiest and most powerful nation on earth Levinson reveals how Ford was ahead of other modern visionaries and discusses why the very ideas that made his company

such a success were abandoned in his own country and why they finally found acceptance in Japan Henry Ford's Lean Vision is a hands on reference that provides the reader with proven principles and methods that can be applied in any business or service enterprise It covers all aspects of building and running a successful enterprise including Ford's principles for human relationships and the management of physical resources Global Consistency of Tolerances Fred van Houten, Hubert Kals, 2013-04-17 This book contains selected contributions from the 6th CIRP International Seminar on Computer Aided Tolerancing which was held on 22-24 March 1999 at the University of Twente Enschede The Netherlands This volume presents the theory and application of consistent tolerancing Until recently CAD/CAM systems did not even address the issue of tolerances and focused purely on nominal geometry Therefore CAD data was only of limited use for the downstream processes The latest generation of CAD/CAM systems incorporates functionality for tolerance specification However the lack of consistency in existing tolerancing standards and everyday tolerancing practice still lead to ill defined products excessive manufacturing costs and unexpected failures Research and improvement of education in tolerancing are hot items today Global Consistency of Tolerances gives an excellent overview of the recent developments in the field of Computer Aided Tolerancing including such topics as tolerance specification tolerance analysis tolerance synthesis tolerance representation geometric product specification functional product analysis statistical tolerancing education of tolerancing computational metrology tolerancing standards and industrial applications and CAT systems This book is well suited to users of new generation CAD/CAM systems who want to use the available tolerancing possibilities properly It can also be used as a starting point for research activities Technical Digest , 1990
