

Answer Key for Algebra 2 Worksheet

1. An asymptote, is a line where functions such as exponential or logarithmic functions approach infinitely can be vertical or horizontal
2. A circle with a radius of 1 unit where the trig ratios can be represented on the coordinate plane where cosine of theta and sine of theta can be represented as (x,y) on the unit circle.
3. The acute angle that measures less than 90 degrees and forms the terminal side to the x axis and is also used to solve for trig values of certain angles on the coordinate plane is known as the reference angle.
4. Something that is used to solve exponential equations and the inverse of an exponential function is called a logarithm.
5. A trigonometric ratio and function represented by the value of the adjacent side to a certain angle divided by the hypotenuse in a right triangle can be represented as a periodic function is called cosine.
6. Sine is defined as the ratio of the side opposite (perpendicular side) to that angle to the hypotenuse in a right triangle and can be represented as a periodic function.
7. The reciprocal of cosine, written as the hypotenuse of a right triangle divided by the adjacent side of the angle, is used as a reference point and is also a trigonometric function known as Secant.
8. The constant e was created by Euler, which is a number that commonly shows up in compound interest problems and serves as the base of a special logarithm called a, natural logarithm.
9. A type of function where it is written as $f(x) = ab^x$ where a is stretch or shrink, b is the base, and x is the value that changes as you increase, or decrease is called an exponential function.
10. The height from the mid-line to the positive and negative extremes of the sine and cosine functions is called the amplitude.
11. The theorem stating $a^2+b^2=c^2$ was created by Pythagoras.

Containing Systematic Solutions to Many of the Most Difficult Problems Benjamin Franklin Finkel, 1888 Teaching and Learning Mathematics through Variation Rongjin Huang, Yeping Li, 2017-02-06 Efforts to improve mathematics teaching and learning globally have led to the ever increasing interest in searching for alternative and effective instructional approaches from others. Students from East Asia such as China and Japan have consistently outperformed their counterparts in the West. Yet Bianshi Teaching, teaching with variation practice which has been commonly used in practice in China, has been hardly shared in the mathematics education community internationally. This book is devoted to theorizing the Chinese mathematical teaching practice Bianshi teaching that has demonstrated its effectiveness over half a century, examining its systematic use in classroom instruction, textbooks, and teacher professional development in China, and showcasing of the adaptation of the variation pedagogy in selected education systems including Israel, Japan, Sweden, and the US. This book has made significant contributions to not only developing the theories on teaching and learning mathematics through variation but also providing pathways to putting the variation theory into action in an international context. This book paints a richly detailed and elaborated picture of both teaching mathematics and learning to teach mathematics with variation. Teaching with variation and variation as a theory of learning are brought together to be theorized and exemplified through analysis of teaching in a wide variety of classrooms and targeting both the content and processes of mathematical thinking. Highly recommended. Kaye Stacey, Emeritus Professor of Mathematics Education, University of Melbourne, Australia. Many teachers in England are excited by the concept of teaching with variation and devising variation exercises to support their pupils' mastery of mathematics. However, fully understanding and becoming proficient in its use takes time. This book provides a valuable resource to deepen understanding through the experiences of other teachers shared within the book and the insightful reflections of those who have researched this important area. Debbie Morgan, Director for Primary Mathematics, National Centre for Excellence in the Teaching of Mathematics, United Kingdom.
