Vegetation and Climate Siegmar-W. Breckle,M. Daud Rafiqpoor,2022-11-07 Vegetation soil and climate are the most important components of ecological systems The book represents a compact synthesis of our current knowledge about the ecology of the Earth and is thus the basis for understanding the major interrelationships in a global perspective In the first part with a rich endowment of illustrations and photographic material the well introduced book deals with the essential processes and operations on the Earth s surface that lead to the formation of the vegetation cover with its distinctive zonation In the second part the individual vegetation zones as large scale ecosystems i e zonobiomes of the biosphere are consistently described comparatively according to certain criteria In a short and compact form the main characteristics and structures as well as examples of ecosystem processes are discussed The large scale ecosystems are at the same time the basis and reference system for all anthropogenic changes that have drastically altered the vegetation in the last millennia but

especially in the 20th century This book is a translation of the original German 1st edition Vegetation und Klima by Siegmund W Breckle and M Daud Rafiqpoor published by Springer Verlag GmbH Germany part of Springer Nature in 2019 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors
