Space Time Structure Erwin Schrödinger:

Space-Time Structure Erwin Schrödinger, 1950-10-17 In response to repeated requests this classic book on space time structure by Professor Erwin Schrödinger is now available in the Cambridge Science Classics series First published in 1950 and reprinted in 1954 and 1960 this lucid and profound exposition of Einstein's 1915 theory of gravitation still provides valuable reading for students and research workers in the field **Space-time Structure**, 1950 **Space-time Structure** Erwin Schrödinger (physicien.), 1950 **On the Role of Spacetime Structure in Physics** Hans Westman, 2002

Spacetime Structure of the Very Early Universe Steven Kenneth Blau, 1985 **Foundations of Space-Time Theories** John Earman, Clark N. Glymour, John J. Stachel, 1977-11-25 Foundations of Space Time Theories was first published in 1977 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions The essays in this volume are based on the papers given at a conference on the philosophical aspects of the space time theory held under the auspices of the Minnesota Center for Philosophy of Science **Global Spacetime Structure** JB Manchak, 2020-12-31 This exploration of the global structure of spacetime within the context of general relativity examines the causal and singular structures of spacetime revealing some of the curious possibilities that are compatible with the theory such as time travel and holes of various types Investigations into the epistemic and modal structures of spacetime highlight the difficulties in ruling out such possibilities unlikely as they may seem at first The upshot seems to be that what counts as a physically reasonable spacetime structure in modern physics is far from clear **The Large Scale Structure of Space-Time** Stephen Hawking, G. F. R. Ellis, 1973 This 1973 book discusses Einstein's General Theory of Relativity and its predictions concerning black holes and singularities in space time itself

Space-Time Structure Erwin Schrödinger, 1950-10-17 In response to repeated requests this classic book on space time structure by Professor Erwin Schrödinger is now available in the Cambridge Science Classics series First published in 1950 and reprinted in 1954 and 1960 this lucid and profound exposition of Einstein's 1915 theory of gravitation still provides valuable reading for students and research workers in the field [Springer Handbook of Spacetime](#) Abhay Ashtekar, Vesselin Petkov, 2014-09-01 The Springer Handbook of Spacetime is dedicated to the ground breaking paradigm shifts embodied in the two relativity theories and describes in detail the profound reshaping of physical sciences they ushered in It includes in a single volume chapters on foundations on the underlying mathematics on physical and astrophysical implications experimental evidence and cosmological predictions as well as chapters on efforts to unify general relativity and quantum physics The Handbook can be used as a desk reference by researchers in a wide variety of fields not only by specialists in relativity but also by researchers in related areas that either grew out of or are deeply influenced by the two relativity theories cosmology astronomy and astrophysics high energy physics quantum field theory mathematics and philosophy of science It should also serve as a valuable resource for graduate students and young researchers entering these

areas and for instructors who teach courses on these subjects The Handbook is divided into six parts Part A Introduction to Spacetime Structure Part B Foundational Issues Part C Spacetime Structure and Mathematics Part D Confronting Relativity theories with observations Part E General relativity and the universe Part F Spacetime beyond Einstein Space, Time and Geometry Patrick Suppes, 2013-03-09 The articles in this volume have been stimulated in two different ways More than two years ago the editor of Synthese Jaakko Hintikka announced a special issue devoted to space and time and articles were solicited Part of the reason for that announcement was also the second source of papers Several years ago I gave a seminar on special relativity at Stanford and the papers by Domotor Harrison Hudgin Latzer and myself partially arose out of discussion in that seminar All of the papers except those of Grünbaum Fine the second paper of Friedman and the paper of Adams appeared in a special double issue of Synthese 24 1972 Nos 1 2 I am pleased to have been able to add the four additional papers mentioned in making the special issue a volume in the Synthese Library Of these four additional articles only the one by Fine has previously appeared in print Synthese 22 1971 448 481 its relevance to the present volume is apparent In preparing the papers for publication and in carrying out the various editorial chores of such a task I am very much indebted to Mrs Lillian O Toole for her extensive assistance

INTRODUCTION The philosophy of space and time has been of permanent importance in philosophy and most of the major historical figures in philosophy such as Aristotle Descartes and Kant have had a good deal to say about the nature of space and time **The Large Scale Structure of Space-time**, 1974 *Space-time Structure* E. Schrödinger, Special Issue: Spacetime Structure and Electrodynamics Wei-Tou Ni, Sperello Di Serego Alighieri, Jonathan Kaufman, Brian Keating, 2016 **Space-Time-Matter** Hermann Weyl, 2021-01-28 This is a new publication of Hermann Weyl's book *Space Time Matter* which was first published in German in 1919 and the English translation was published in 1922 What makes Weyl's book invaluable is that in addition to his masterfully presented lectures on special and general relativity starting with a helpful introduction to tensor analysis he was the first and essentially the only one so far who tried to reconcile two seemingly unreconcilable facts Minkowski's discovery deduced from the failed experiments to detect absolute motion of the spacetime structure of the world that it is a static four dimensional world containing en bloc the entire history of the perceived by us three dimensional world and the intersubjective fact that we are aware of ourselves and the world only at one single moment of time the present moment the moment now which constantly changes Weyl reached the conclusion that it is our consciousness somehow traveling in the four dimensional world along our worldlines which creates our feeling that time flows Unfortunately Weyl's reconciliation of the above facts has not been rigorously examined so far the apparent contradiction that the consciousness travels in the frozen four dimensional world spacetime is not an excuse because Weyl had surely been aware of it and nevertheless went public with his proposed resolution **The Underdetermination of Global Spacetime Structure** John Byron Manchak, 2009 **Spacetime** Marcus Kriele, 1999-10-19 This textbook is for mathematicians and mathematical physicists

and is mainly concerned with the physical justification of both the mathematical framework and the foundations of the theory of general relativity Previous knowledge of the relevant physics is not assumed This book is also suitable as an introduction to pseudo Riemannian geometry with emphasis on geometrical concepts A significant part of the text is devoted to the discussion of causality and singularity theorems The insights obtained are applied to black hole astrophysics thereby making the connection to current active research in mathematical physics and cosmology

At the Frontier of Spacetime Torsten Asselmeyer-Maluga, 2016-04-28 In this book leading theorists present new contributions and reviews addressing longstanding challenges and ongoing progress in spacetime physics In the anniversary year of Einstein's General Theory of Relativity developed 100 years ago this collection reflects the subsequent and continuing fruitful development of spacetime theories The volume is published in honour of Carl Brans on the occasion of his 80th birthday Carl H Brans who also contributes personally is a creative and independent researcher and one of the founders of the scalar tensor theory also known as Jordan Brans Dicke theory In the present book much space is devoted to scalar tensor theories Since the beginning of the 1990s Brans has worked on new models of spacetime collectively known as exotic smoothness a field largely established by him In this Festschrift one finds an outstanding and unique collection of articles about exotic smoothness Also featured are Bell's inequality and Mach's principle Personal memories and historical aspects round off the collection

The Curvature of Spacetime Harald Fritzsch, 2002 The internationally renowned physicist Harald Fritzsch deftly explains the meaning and far flung implications of the general theory of relativity and other mysteries of modern physics by presenting an imaginary conversation among Newton Einstein and a fictitious contemporary particle physicist named Adrian Haller In this entertaining and involving account of relativity Newton serves as the skeptic and asks the questions a modern reader might ask Einstein himself does the explaining while Haller explains the new developments that have occurred since the general theory was proposed
