Key Features

- Large, bright, high-resolution screen makes information control easy
- Optimized for Trimble Access field software
- Fully-integrated camera, GPS navigation, and communications
- Improved collaboration and control through consistent connectivity

The Trimble® TSC3 controller with Trimble Access™ software is a groundbreaking handheld field computing solution that streamlines the flow of everyday surveying work and the number of devices you need in the field.

A POWERFUL ENGINE FOR DRIVING TRIMBLE ACCESS SOFTWARE

Part of a trusted line of field controllers, the Trimble TSC3 controller is rugged and designed for surveyor's workflows. It performs Trimble Access operations fast and delivers ample power to run third-party applications on the Windows® platform.

Make Pictures an Essential Part of Your Workflow

With a built-in 5 MP autofocus camera and LED flash, you can take digital photographs of your job site right from the controller. No extra devices, batteries, or file transfers are required, and images are automatically geotagged for easy identification.

Easily record the qualitative information that survey data alone can't tell, such as site conditions or work progress. The benefits of including images as part of your workflow are almost limitless: from data data-handover to in-field quality assurance.

Communications that Bridge Field and Office in Real-Time

The TSC3 controller enables wireless Internet connectivity through an integrated GSM/GPRS/GPRS/HSPA2 modem. This allows Trimble Access software to facilitate a constant flow of information between field and office, including real-time synchronization of field and office data with Trimble AccessSync software. You can download and upload important files any time and from anywhere, as needed. Data collection, processing, analysis, and delivery are faster and more efficient.

A variety of communication options let you transfer critical information to master the environment. Connect via Wi-Fi™ connections using the internal modem's 802.11n, or USB and serial RS-485 communication options.

For All of Your Surveying Applications

The rugged TSC3 controller is purpose-built to make both integrated surveying and special imaging jobs easier, more efficient, and more flexible.

Easy-to-Use Interface

Control your survey and verify your work on the large, bright, high-resolution LCD touchscreen. With the option of a QWERTY or conventional alpha-numeric keyboard, data entry is quick and easy.

An Internal Compass

Receive direction cues when what you see disagrees or moving backwards.

Integrated GPS

Employ GPS search on a conventional survey without an external GPS receiver. You can also navigate and find control points and other points quickly.

Cables Eliminated

Bluetooth® wireless technology eliminates cables in surveying systems. An optional 2.4 GHz radio option is also ideal for controlling Trimble robotic systems.

Designed to Support Your Daily Workflows

Trimble Access field software available on the TSC3 controller offers numerous features and capabilities to streamline the flow of everyday surveying work. Streamlined workflows — such as Roads, Monitoring, Mines, and Tunnels — guide crews through common project types and allow crews to get the job done faster with less distraction.

Survey companies can also implement their unique workflows by taking advantage of the customization capabilities available in the Trimble Access Software Development Kit (SDK). The Trimble Access SDK provides software developers with the tools to customize and extend Trimble Access.

With a bright, daylight-readable display, integrated communications, and integrated survey workflows, the fully integrated TSC3 controller will make your field work more efficient.
