- To use an applet, it is specified in an HTML file. One way to do this is by using the APPLET tag.
- The applet will be executed by a Java-enabled web browser when it encounters the APPLET tag within the HTMLfile.
- To view and test an applet more conveniently, simply include a comment at the head of your Java source code file that contains the APPLET tag.
- This way, your code is documented with the necessary HTML statements needed by your applet, and you can test the compiled applet by starting the applet viewer with your Java source code file specified as the target.

```
/*  
    <applet code="MyApplet" width=200 height=60>  
    </applet>  
*/
```

- This comment contains an APPLET tag that will run an applet called **MyApplet** in a window that is 200 pixels wide and 60 pixels high.
- Because the inclusion of an APPLET command makes testing applets easier, all of the applets shown in this book will contain the appropriate APPLET tag embedded in a comment.
