Replete with illustrations, end of chapter exercises and selected solutions, the work is primarily useful as a textbook for advanced undergraduate and beginning graduate level students.

With its end of chapter examples and problems, this book is suitable for graduate level or even undergraduate courses in spaceflight as well as for professionals working in the space industry. This fourth edition includes substantial revisions of many sections to extend their coverage. These include an overview of the different approaches to solving Newton's gravitational equation of motion, a concise and newly structured coverage of orbital maneuvering, an enlarged and improved section about the sphere of influence, a new section about hierarchical three body systems, major enlargements in space reference frames and orbit geometry, and a new section about the earth reference ellipsoid.
