French,2007-08-09 The philosophical questions raised by the history and practice of science are among the most complex and stimulating *Science Key Concepts in Philosophy* is the ideal first stop for any student wishing to get to grips with this challenging subject Written with the specific needs of students new to the discipline in mind it covers the work of key thinkers and outlines clearly the central questions problems and arguments encountered in studying the philosophy of science This is a practical and informative introduction to a major component of the undergraduate philosophy curriculum *Key Concepts in Philosophy* is a series of concise accessible and engaging introductions to the core ideas and subjects encountered in the study of philosophy Specially written to meet the needs of students and those with an interest in but little prior knowledge of philosophy these books open up fascinating yet sometimes difficult ideas The series builds to give a solid grounding in philosophy and each book is also ideal as a companion to further study *Agency and Causal Explanation in Economics* Peter Róna,László Zsolnai,2019-11-07 This open access book provides an exploration of the consequences of the ontological differences between natural and social objects sometimes described as objects of nature and objects of thought in the workings of causal and agency relationships One of its important and possibly original conclusions is that causal and agency relationships do not encompass all of the dependent relationships encountered in social life The idea that social reality is contingent has been known and largely undisputed at least since Wittgenstein s *On Certainty* but social science and most notably economics has continued to operate on the basis of causal and agency theories borrowed or adapted from the natural sciences This volume contains essays that retain and justify the partial or qualified use of this approach and essays that totally reject any use of causal and agency theory built on determined facts closed systems The rejection is based on the possibly original claim that whereas causation in the objects of the natural sciences reside in their properties human action is a matter of intentionality It engages with critical realist theory and re examines the role of free will in theories of human action in general and economic theory in particular *Social Neuroeconomics* Jens Harbecke,Carsten

Herrmann-Pillath,2020-09-23 Neuroeconomics has emerged as a paradigmatic field where neuroscience and the social sciences are integrated in one analytical and empirical approach However the different disciplines involved often only relate to each other via the shared object of research and less through the constructing of precise models of integrative mechanisms *Social Neuroeconomics* explores the potential of philosophical and methodological reflections in the neurosciences and the social sciences to inform those efforts at cross disciplinary integration with a special focus on recent contributions to mechanistic explanations The collected essays are drawn from the fields of neuroscience psychology economics sociology and philosophy and examine the ways and methods of constructing unified conceptual frameworks that can guide empirical work and hypothesis building This is demonstrated in a range of applications particularly regarding

finance and consumer behavior The concept of the social brain is also explored a multilevel framework in which complex analytical categories such as emotions or socially mediated cognitive processes connect neuronal and social phenomena in specific mechanisms that generate behavior This book addresses a wide audience across the various disciplines reaching from the neurosciences to the social sciences and philosophy **The Bloomsbury Companion to Locke** S.-J.
