Neutron capture therapy Neutron capture therapy has largely but not exclusively focused on the use of boron 10 as the target nuclide Boron neutron capture therapy BNCT is based on the nuclear reaction that occurs when the stable isotope boron 10 absorbs low energy non ionizing thermal neutrons to yield alphaparticles and recoiling lithium 7 nuclei The size and energy of these high linear energy transfer LET particles result in their being confined largely to the cells in which the capture reaction occurs For BNCT to be successful a sufficient number of  $^{10}\text{B}$  atoms must be localized within neoplastic cells and enough thermal neutrons must be delivered and absorbed by the  $^{10}\text{B}$  to produce a lethal  $^{10}\text{B}(n,\alpha)^7\text{Li}$  reaction Two major problems must be surmounted Hungarian R&D Articles, 2003 *Immunology of Psoriatic Disease* Eva Reali, Nicolò Costantino

Brembilla, 2019-07-31 Psoriasis is a chronically relapsing inflammatory skin disorder affecting about 2% of the worldwide population The disease is associated with important systemic manifestations including cardiovascular comorbidities and metabolic syndrome In addition about 30% of patients develop joint inflammation known as psoriatic arthritis PsA Our knowledge on the pathogenesis of psoriasis has dramatically expanded in the last decade suggesting the existence or co existence of both auto immune and auto inflammatory components Skin lesions develop from a complex interplay between keratinocytes vascular endothelium dendritic cells and T cells generating a self sustaining inflammatory cycle Within this cycle epidermal CD8 T lymphocytes specific for self antigens may represent the major autoimmune mechanism Despite the recent progress in the comprehension of the pathogenesis of psoriasis many questions remain open ranging from the plaque initiating events to the characterization of the autoimmune autoinflammatory components of the disease The mechanisms that link cutaneous psoriasis to its extra cutaneous and systemic manifestations also remain vague In this Research Topic we invited top scientists to summarize the front line research in the field of immunology of cutaneous psoriasis and its systemic and joint manifestations Our intention was to integrate the pillar concepts of psoriasis immunopathology with the most novel insights aiming at providing an advanced view of this rapidly evolving and fascinating field 2021 00000 00000000

*Polar Auxin Transport* Rujin Chen,František Baluška,2013-04-03 The importance of the plant growth regulator auxin for plant growth has long been recognized even before the discovery of its chemical structures in the early 20th century Physiological studies in the decades since have demonstrated that auxin is unidirectionally transported in plants a process dubbed polar auxin transport It is the polar auxin transport process that generates a local auxin concentration gradient and regulates a broad array of physiological and developmental processes The discoveries of auxin transport carrier proteins that mediate auxin influx into and efflux out of transport competent cells and auxin receptor proteins for auxin signaling in the last few decades represent significant milestones in auxin research and open up opportunities to probe the cellular and molecular processes that regulate auxin transport and integrate environmental cues with signaling processes Remarkably components of the polar auxin transport machinery are present in both lower plants such as mosses and higher plants including monocots and eudicots illustrating the key role of polar auxin transport in plant evolution This book highlights topics ranging from physiological and genetic studies of polar auxin transport in plant development to growth responses to the environment and plant microbe interactions to hormonal cross talks with various cellular and molecular regulatory processes essential for polar auxin transport
