

# Using Dichotomous Keys to Identify Arachnids and Insects

**Background:** One kind of arachnid, the wind scorpion, is so named because it seems to run as fast as the wind. The sea spider, another arachnid, lives on the ocean floor. The trapdoor spider digs a hole in the ground, covers it with a silk trapdoor, camouflages the trapdoor with leaves, and waits for its prey to walk across the trapdoor. When its prey passes above, the spider feels the vibrations and opens the trapdoor to make the capture. These arachnids are only three examples of the thousands of different types of arachnids. Arachnids, as well as other organisms, are often identified by their physical traits. A dichotomous key, based on visible physical traits, can help you identify members of a group of related organisms. Dichotomous means branching into two parts. As you use a dichotomous key, you read pairs of descriptions and decide which description of each pair is true about the organism you are identifying. In this laboratory you will use and make dichotomous keys for the identification of some arachnids and other arthropods. **You still to include your own background on why insects are the most successful arthropod class.**

- Objectives:**
- Use a dichotomous key to identify types of arachnids.
  - Construct a dichotomous key for the identification of some insects.
  - Hypothesis none
  - Variables none

**Materials:** Pen and paper. Optional: Field guide to arachnids and insects

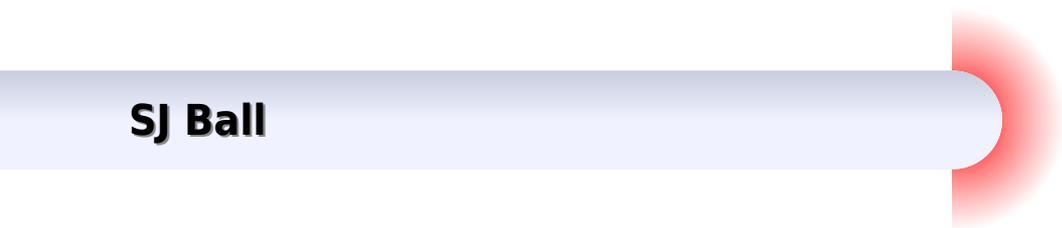

## Part A: Using A Dichotomous Key

1. Before you use the dichotomous key to identify the arachnids on the attached page, review arachnid anatomy by studying the diagrams above. In all arachnids the body is divided into two sections: the cephalothorax and the abdomen. Find the cephalothorax and the abdomen in each arachnid. Note how these body sections are joined. Observe whether the abdomen is segmented or lacks segments (example, "h" is segmented). All arachnids have six pairs of appendages: one pair of jaws, eight walking legs and two pedipalps.
2. Use the dichotomous key on the next page to identify each arachnid (a-n). Beginning with the first pair of statements, decide which statement is true for the arachnid. Proceed to the next pair of statements as directed by the key. When the key lists a name rather than a number of a statement pair, then you have identified the arachnid. Be sure to record each step of the key you used to identify the arachnid.

# Using Dichotomous Keys To Identify Arachnids And Insects Key

**SJ Ball**

**Using Dichotomous Keys To Identify Arachnids And Insects Key:**

When somebody should go to the books stores, search initiation by shop, shelf by shelf, it is in fact problematic. This is why we offer the book compilations in this website. It will very ease you to see guide **Using Dichotomous Keys To Identify Arachnids And Insects Key** as you such as.

By searching the title, publisher, or authors of guide you in reality want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be all best area within net connections. If you point to download and install the Using Dichotomous Keys To Identify Arachnids And Insects Key, it is agreed simple then, in the past currently we extend the associate to buy and create bargains to download and install Using Dichotomous Keys To Identify Arachnids And Insects Key suitably simple!
