Schwartz, 2012-12-06 This book encompasses the science measurement fabrication and use of superconducting materials in large scale and small scale technologies The present book is in some sense a continuation and completion of a series of two earlier books based on NATO Advanced Study Institutes held over the last decade The first book in the series entitled Superconducting Machines and Devices Large Systems Applications edited by S Foner and B B Schwartz 1974 represented a compilation of all the applications of superconducting technology The second book entitled Superconductor Applications Squids and Machines edited by B B Schwartz and S Foner 1977 reviewed small scale applications and updated the large scale applications of superconductivity at that time These two books are both introductions and advanced reference volumes for almost all aspects of the applications of superconductivity The growth of applied superconductivity has mushroomed in the decade of the 1970 s Technologies which were discussed in the beginning of the 1970 s are now beyond the prototype stage Materials development and performance in operating systems is the basis of the continued applications and economic viability of superconducting technology In this book a complete review of all materials technology is presented by leading authorities who were instrumental in the development of superconducting materials technology The present book is based on the NATO Advanced Study Institute entitled Superconducting Materials Science and Technology which was held from August 20 to August 30 1980 in Sintra Portugal

Particles, Strings and Cosmology Kiwoon Choi, John E. Kim, Dongchul Son, 2005-12-12 PASCOS is an interdisciplinary symposium on the interface of Particle physics String theory and Cosmology Over the past two decades these three disciplines have increasingly become closer Historically there was always a strong overlap between particle physics and cosmology This connection has become even stronger with the realization that some of the fundamental issues in cosmology such as the presence of dark matter and dark energy may possibly find a resolution only via new theories of particle physics At the same time string theory has begun to play an increasingly important role in particle physics as a possible framework for building unified models of particle interaction including gravity In recent years we have seen an increasing overlap between cosmology and string theory and currently the area of string cosmology is one of the most active fields of research PASCOS 2005 aimed to provide coherent discussions of recent developments on the interface of the three disciplines and also on their interconnections In particular superstring aspects in low energy particle theory SUSY and cosmological applications moduli stabilization are extensively covered in this volume Topics include dark matter and dark energy baryogenesis flavor and CP violation neutrino physics supersymmetry and extra dimensions flux compactification string model building as well as brane cosmology
