Making Estelita Vaz, Cristina Joanaz de Melo, Lúgia M. Costa Pinto, 2016-10-13 This book is the product of the 2nd World Conference on Environmental History held in Guimarães Portugal in 2014 It gathers works by authors from the five continents addressing concerns raised by past events so as to provide information to help manage the present and the future It reveals how our cultural background and examples of past territorial intervention can help to combat political and cultural limitations through the common language of environmental benefits without disguising harmful past human interventions Considering that political ideologies such as socialism and capitalism as well as religion fail to offer global paradigms for common ground an environmentally positive discourse instead of an ecological determinism might serve as an umbrella common language to overcome blocking factors real or invented and avoid repeating ecological loss Therefore agency environmental speech and historical research are urgently needed in order to sustain environmental paradigms and overcome political cultural and economic interests in the public arena This book intertwines reflections on our bonds with landscapes processes of natural and scientific transfer across the globe the changing of ecosystems the way in which scientific knowledge has historically both accelerated destruction and allowed a better distribution of vital resources or as it in today's world can offer alternatives that avoid harming those same vital natural resources water soil and air In addition it shows the relevance of cultural factors both in the taming of nature in favor of human comfort and in the role of the environment matters in the forging of cultural identities which cannot be detached from technical intervention in the world

In short the book firstly studies the past approaching it as a data set of how the environment has shaped culture secondly seeks to understand the present and thirdly assesses future perspectives what to keep what to change and what to dream anew considering that conventional solutions have not sufficed to protect life on our planet

Environmental History of the Hudson River Robert E. Henshaw, 2011-09-01 Winner of the 2012 Award for Excellence presented by the Greater Hudson Heritage Network The diverse contributions to Environmental History of the Hudson River examine how the natural and physical attributes of the river have influenced human settlement and uses and how human occupation has in turn affected the ecology and environmental health of the river The Hudson River Valley may be America's premier river environmental laboratory and by bringing historians and social scientists together with biologists and other physical scientists this book hopes to foster new ways of looking at and talking about this historically commercially and aesthetically important ecosystem Native people's influences on the ecological integrity of aquatic and shoreline communities were generally local and minor and for the first 12 000 years or so of human use the Hudson River was valued mainly as a source of water food and transportation Since the arrival of European colonists however commerce has been the engine that has driven development and use of the river from the harvesting of beaver pelts and timber to the siting of manufacturing industries and power plants and all of these uses have had pervasive effects on the river's aquatic and terrestrial ecosystems In the meantime aesthetic movements such as the Hudson River School of painting have sought to recover and preserve the earlier pastoral landscape anticipating the more recent efforts by environmentalists that have led to dramatic improvements in water quality shoreline habitats and fish populations Despite the pervasive forces of commerce the Hudson River has retained its world class scenic qualities The Upper Hudson remains today a free flowing tumbling mountain stream and the Lower Hudson a fjord penetrated and dominated by the Hudson Highlands The Hudson's unique history continues to affect current uses and will surely influence the future in remarkable ways
