

THE BREEDING TREE

A woman with dark, wavy hair is lying on a large, moss-covered tree root in a dark, dense forest. She is wearing a sleeveless, feathered costume and has her legs crossed. Her right arm is raised behind her head, and she is looking towards the camera with a slight smile. The background is filled with the trunks and branches of trees, creating a mysterious and naturalistic setting.

The Breeding Tree Bred In Captivity:

Amphibian Conservation Rebecca K. Smith, William J. Sutherland, 2014-05-16 Amphibian Conservation is the fourth in the series of Synopses of Conservation Evidence linked to the online resource www.ConservationEvidence.com This synopsis is part of the Conservation Evidence project and provides a useful resource for conservationists. It forms part of a series designed to promote a more evidence based approach to biodiversity conservation. Others in the series include bee bird farmland and bat conservation and many others are in preparation. Approximately 32% of the 7 164 amphibian species are currently threatened with extinction and at least 43% of species are declining. Despite this until recently amphibians and their conservation had received little attention. Although work is now being carried out to conserve many species often it is not adequately documented. This book brings together and summarises the available scientific evidence and experience relevant to the practical conservation of amphibians. The authors consulted an international group of amphibian experts and conservationists to produce a thorough summary of what is known or not known about the effectiveness of amphibian conservation actions across the world. The book is packed with literature summaries and citations a veritable information goldmine for graduate students and researchers. It also admirably provides decision makers with a well researched resource of proven interventions that can be employed to stem reverse the decline of amphibian populations. Toucans, Barbets, and Honeyguides Lester Short, Jennifer F. M. Horne, 2001-11-08 This superbly illustrated book covers in unmatched detail the life history relationships biology and conservation of all the world's toucans barbets and honeyguides. The colour plates painted by well known American artist Albert Earl Gilbert are probably the best paintings of these birds ever produced.

Parrots of Africa, Madagascar and the Mascarene Islands Laubscher, Mike Perrin, 2012-12-01 A detailed examination of all aspects of parrots from behavior to their conservation. Parrots colour and charisma coupled with the fact that they mimic human speech make them fascinating to many people. They are ancient birds with unique bill and foot structures that enable them to forage on fruits in the canopy of forest trees as well as on seeds in grasslands. Because they depend on fruits and seeds all year round most species are confined to the tropics or sub tropics where the world's biodiversity is at its greatest. There are over three hundred species of parrots of which more than one hundred are recognised as rare endangered vulnerable or threatened with extinction. Parrots are largely distributed in tropical areas of developing countries where economies are weak and uncertain and where there is great dependence on the exploitation of natural resources particularly hard wood evergreen forests which are preferred parrot habitats. Unfortunately high levels of corruption are common to these regions with much illegal trade in animals and little or no law enforcement. Collectors of parrots in the first world pay huge sums for rare parrots. However research

education and conservation actions are greatly reducing illegal trade in African parrots This book provides complete coverage of all aspects of the biology of extant African Malagasy and Mascarene parrots and reviews our knowledge of extinct and fossil parrots from the region Particular themes include the behavioural and ecological characteristics of parrots their species characteristics and conservation biology Current concepts in avian and conservation biology are also discussed Parrots of Africa Madagascar and the Mascarene Islands is aimed at ornithologists conservation biologists avian ecologists academics bird watchers and parrot fans alike It is well illustrated with high quality original photographs and includes distribution maps figures and tables

A Primer of Conservation Genetics Richard Frankham, Jonathan D. Ballou, David A. Briscoe, 2004-02-12 This concise entry level text provides an introduction to the importance of genetic studies in conservation and presents the essentials of the discipline in an easy to follow format with main points and terms clearly highlighted The authors assume only a basic knowledge of Mendelian genetics and simple statistics making the book accessible to those with a limited background in these areas Connections between conservation genetics and the wider field of conservation biology are interwoven throughout the book Worked examples are provided throughout to help illustrate key equations and glossary and suggestions for further reading provide additional support for the reader Many beautiful pen and ink portraits of endangered species are included to enhance the text Written for short introductory level courses in genetics conservation genetics and conservation biology this book will also be suitable for practising conservation biologists zoo biologists and wildlife managers

What Works in Conservation 2021 William J. Sutherland, Lynn V. Dicks, Silviu O. Petrovan, Rebecca K. Smith, 2021-08-02 Does the creation of artificial reefs benefit subtidal benthic invertebrates Is the use of organic farming instead of conventional farming beneficial to bat conservation Does installing wildlife warning reflectors along roads benefit mammal conservation Does the installation of exclusion and or escape devices on fishing nets benefit marine and freshwater mammal conservation What Works in Conservation has been created to provide practitioners with answers to these and many other questions about practical conservation This book provides an assessment of the effectiveness of 2526 conservation interventions based on summarized scientific evidence The 2021 edition contains substantial new material on bat conservation terrestrial mammal conservation and marine and freshwater mammals thus completing the evidence for all mammal species categories Other chapters cover practical global conservation of primates amphibians bats birds forests peatlands subtidal benthic invertebrates shrublands and heathlands as well as the conservation of European farmland biodiversity and some aspects of enhancing natural pest control enhancing soil fertility management of captive animals and control of freshwater invasive species It contains key results from the summarized evidence for each conservation intervention and an assessment of the effectiveness of each by international expert panels The accompanying website www.conservationalevidence.com describes each of the studies individually and provides full references This is the sixth author approved edition of What Works in Conservation which is revised on an annual basis
