Structure Ryan M. Nefdt, 2023 This work provides a new framework for understanding some of the most profound theories of human language Ryan M Nefdt touches on philosophical questions of what languages are how they evolved and what the science of language should be He takes insights and results from the natural and formal sciences and translates them into a new domain His book offers the reader new ways of appreciating how the most unique of human traits our ability to process and produce natural language has been and can be studied from a scientific point of view Arts: A Science Matter Maria

Burguete, Lui Lam, 2011-04-26 This book treats arts as part of science from the unified perspective of Science Matters It contains 17 chapters with 18 contributors who are prominent humanists professional artists or scientists It consists of three parts Part I Philosophy and History of Arts Part II Arts in Action Part III Understanding Arts The book is aimed at both research scholars and laypeople and is unique in two important aspects It is probably the first and only book that academic

professionals and practicing artists contribute to the same book as equals on the common theme of creating and understanding arts Artists here include Cristina Leiria whose huge Kun Iam Goddess of Mercy sculpture is an important landmark in Macau and the famous movie director Hark Tsui who is publishing his first ever article on movie making Perhaps more importantly a new understanding of the origin and nature of arts is offered for the first time which is more convincing than all the other hypotheses put forth in the last two thousand years *Lexical Representation* Gareth Gaskell, Pienie Zwitserlood, 2011-05-26 This book includes the work of experts from a wide range of backgrounds who share the desire to understand how the human brain represents words The focus of the volume is on the nature and structure of word forms and morphemes the processes operating on the speech input to gain access to lexical representations the modeling and acquisition of these processes and on the neural underpinnings of lexical representation and process *The Segmentation and Representation of Translocative Motion Events in English and Chinese Discourse* Guofeng Zheng, 2020-12-01 This book provides a systematic contrastive analysis of the segmentation and representation of English and Chinese Translocative Motion Events TMEs which possess Macro Event Property MEP It addresses all the issues critical to understanding TMEs in English and Chinese from event segmentation MEP principles and the conceptual structure of TMEs and their constituents to the representation of Actant Motion Path and Ground The book argues that the corpus based alignment for the TME segmentation in both languages the parameters of Actant Motion Path and Ground and their relevant statistical description are particularly important for understanding English and Chinese TMEs The linguistic materialization of Actant Ground Path and Motion together with a wealth of tables and figures offers convincing evidence to support the typological classification of English and Chinese The book's suggestions regarding the Talmyan bipartite typology and Bohnemeyer's MEP contribute to the advancement of TME studies and language typology and help learners to understand motion events and English Chinese typological similarities and differences *Foundations of Musical Grammar* Lawrence M. Zbikowski, 2017-08-02 In recent years music theorists have been increasingly eager to incorporate findings from the science of human cognition and linguistics into their methodology In the culmination of a vast body of research undertaken since his influential and award winning *Conceptualizing Music* OUP 2002 Lawrence M Zbikowski puts forward *Foundations of Musical Grammar* an ambitious and broadly encompassing account on the foundations of musical grammar based on our current understanding of human cognitive capacities Musical grammar is conceived of as a species of construction grammar in which grammatical elements are form function pairs Zbikowski proposes that the basic function of music is to provide sonic analogs for dynamic processes that are important in human cultural interactions He focuses on three such processes those concerned with the emotions the spontaneous gestures that accompany speech and the patterned movement of dance Throughout the book Zbikowski connects cognitive research with music theory for an interdisciplinary audience presenting detailed musical analyses and summaries of the basic elements of musical grammar *The Routledge Handbook of Pragmatics* Anne

Similes, Puns and Counterfactuals in Literary Narrative Jennifer Riddle Harding, 2017-04-21 In this study Jennifer Riddle Harding presents a cognitive analysis of three figures of speech that have readily identifiable forms similes puns and counterfactuals Harding argues that when deployed in literary narrative these forms have narrative functions such as the depiction of conscious experiences allegorical meanings and alternative plots uniquely developed by these more visible figures of speech Metaphors by contrast are often invisible in the formal structure of a text With a solid cognitive grounding Harding s approach emphasizes the relationship between figurative forms and narrative effects Harding demonstrates the literary functions of previously neglected figures of speech and the potential for a unified approach to a topic that crosses cognitive disciplines Her work has implications for the rhetorical approach to figures of speech for cognitive disciplines and for the studies of literature rhetoric and narrative
