We refer to these moons and similar ocean bearing planetary objects as ocean worlds In this 2nd edition we delve into and compare the latest scientific discoveries on 22 confirmed or potential ocean worlds ranging from the giant asteroid Ceres and the icy moons Europa and Enceladus to the distant dwarf planets of the outer Solar System such as Pluto Sedna and Eris Along the way we explore the contributions of multiple spacecraft such as the Pioneers the Voyagers Galileo Cassini Huygens and many others which have provided much of our current knowledge about these worlds as well as the latest scientific research on this subject. This book also explores the potential for life on each of the confirmed ocean worlds evaluating their habitability Ultimately these might hold the key to answering fundamental questions about life How did life begin Is there life beyond Earth Where do we come from With contributions from leading planetary scientists at NASA ESA and other institutions this book aims to be the definitive reference for anyone interested in this captivating subject The Life and Death of Stars Kenneth R.
