Introduction to Optimum Design Fourth Edition carries on the tradition of the most widely used textbook in engineering optimization and optimum design courses. It is intended for use in a first course on engineering design and optimization at the undergraduate or graduate level in engineering departments of all disciplines with a primary focus on mechanical, aerospace, and civil engineering courses. Through a basic and organized approach, the text describes engineering design optimization in a rigorous yet simplified manner, illustrates various concepts and procedures with simple examples, and demonstrates their applicability to engineering design problems. Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text using Excel and MATLAB as learning and teaching aids. This fourth edition has been reorganized, rewritten in parts, and enhanced with new material, making the book even more appealing to instructors regardless of course level. Includes basic concepts of optimality conditions and numerical methods that are described with simple and practical examples, making the material highly teachable and learnable. Presents applications of optimization methods for structural, mechanical, aerospace, and industrial engineering problems. Provides practical design examples that introduce students to the use of optimization methods early in the book. Contains a chapter on several advanced optimum design topics that serve the needs of instructors who teach more advanced courses.

**Innovations in Flotation Technology** P. Mavros, Kostas A. Matis, 2013-03-14. The present book is the outcome of an Advanced Study Institute meeting which was held in Kallithea, Chalkidiki, in Northern Greece from 12-25 May 1991 and attended by 69 delegates from 18 countries. The Institute brought together scientists, engineers, and technologists currently involved in basic and applied research on the different aspects of flotation. The Institute covered subjects in four major areas of flotation: a) fundamentals, b) chemical technology, aspects c) mineral processing, and d) water and wastewater treatment. Apart from the papers reproduced in this volume, several short oral communications were also presented. Participants also had the opportunity to visit the Hellenic Chemical Products Fertilizers Co. Ltd. mixed sulphides plant in Chalkidiki. Conference participants whose interest and research projects are in this broad field of science and engineering provided a well-informed discussion of the problems encountered as well as possible directions of future technological developments. It is hoped that this book is not only a good record of the presentations made formally and informally, analyzing the state of the art in flotation, but will also be helpful for students.

scientists and technologists working in the fields of separation processes and in particular mineral processing and wastewater engineering All the invited speakers and the participants made this summer school possible worthwhile and enjoyable The sponsorship by the NATO Scientific Affairs Division is gratefully acknowledged The Editors would like to thank the members of the Organizing Committee Dr B A
