Pratchett, Michael L. Berumen, B. G. Kapoor, 2013-09-11 Butterflyfishes family Chaetodontidae are a highly conspicuous component of fish fauna on coral reefs throughout the world In light of their strong dependence on coral they are often regarded as the epitome of coral reef fishes This volume examines the ecology and conservation of coral reef butterflyfishes It provides important insights on their evolution and key events and adaptations that have led to their proliferation within coral reef ecosystems Key to the longevity of butterflyfishes is the evolution of coral feeding a central focus of the ecological chapters in this volume The book also highlights key threats and challenges related to the conservation of butterflyfishes and ends with an overview of current and future research directions **The butterflyfishes: success on the coral reef** Philip J. Motta, 2012-12-06 Butterflyfishes of the family Chaetodontidae are conspicuous members of almost all tropical reefs These colorful fishes have attracted a great deal of attention from both the scientific community and especially the aquarium fish industry At first one is tempted to say that butterflyfishes are abundant worldwide but the evidence does not support this statement The biomass of chaetodontids on reefs may range from 0.02 to 80% and in terms of numbers they comprise only 0.04 to 61 % of the individuals on the reef Yet in spite of these relatively small numbers they have been extensively studied A quick census shows some 170 articles on or about butterfly fishes with 78% of them being published since the 1970 s Along with the cichlids and damselfishes they might be one of the most studied and well published family of tropical fishes Why then have chaetodontids attracted so much attention The butterflyfishes are mostly shallow water inhabitants that are approachable and easily recognizable making their study very feasible Their bright coloration has provoked many hypotheses but has posed more questions about coloration than it has provided answers And despite their apparent overall morphological similarity their highly structured and varied social systems have made them an

ideal model for such studies The reasons for choosing these organisms are indeed as diverse as the studies themselves
