Environmental control systems are the components of a building that keep occupants comfortable and help make the building work. Mechanical and Electrical Equipment for Buildings covers both active controls like air conditioners and heaters as well as passive controls like daylighting and natural ventilation. Because these systems comprise the entire energy use and costs of a building's life, the book stresses the importance of sustainability considerations during the design process by both architects and builders. Authored by two leading green design educators, MEEB provides the most current information on low energy architecture including topics like Context, comfort, and environmental resources. Indoor air quality and thermal control, Illumination, acoustics, and electricity, Fire protection, signal systems, and transportation, Occupant comfort, and building usability are the most critical factors in the success of a building design, and with environmental concerns mounting, it's becoming more and more important to approach projects from a sustainable perspective from the very beginning. As the definitive guide to environmental control systems for over 75 years, Mechanical and Electrical Equipment for Buildings is a complete resource for students and professionals alike.

HVAC Equations, Data, and Rules of Thumb, Third Edition Arthur A. Bell, W. Larsen Angel, 2015-12-22. This comprehensive volume, often called the HVAC bible, has been thoroughly updated to cover the latest code changes, equipment, and techniques. HVAC Equations, Data, and Rules of Thumb 3e offers all of the information an HVAC student or professional needs in one resource. The book thoroughly explains the expansion of piping systems and temperature limitations of new materials such as polyethylene, polypropylene, PVC, CPVC, and PEX. Detailed information is included for all types of facilities, including offices, hotels, hospitals, restaurants, commercial spaces, and computer rooms. This practical handbook reflects all the latest code changes, including the ASHRAE standards, and explains how to interpret and put them to use. It includes completely updated coverage of new pumps, chillers, air handling units, cooling equipment, boilers, and pipe material. You will get complete coverage of sustainability organizations that have become more important since last edition, including LEED, USGBC, and Energy Star. Features hundreds of equations and rules for everything from ductwork to air handling systems. Includes a brand new chapter on sound, vibration, and acoustics. Contains an updated list of equipment manufacturers for all products featured.

**Technology for a Quieter America** National Academy of Engineering, Committee on Technology for a Quieter America, 2010-10-30 Exposure to noise at home at work while traveling and during leisure activities is a fact of life for all Americans At times noise can be loud enough to damage hearing and at lower levels it can disrupt normal living affect sleep patterns affect our ability to concentrate at work interfere with outdoor recreational activities and in some cases interfere with communications and even cause accidents Clearly exposure to excessive noise can affect our quality of life As the population of the United States and indeed the world increases and developing countries become more industrialized problems of noise are likely to become more pervasive and lower the quality of life for everyone Efforts to manage noise exposures to design quieter buildings products equipment and transportation vehicles and to provide a regulatory environment that facilitates adequate cost effective sustainable noise controls require our immediate attention Technology for a Quieter America looks at the most commonly identified sources of noise how they are characterized and efforts that have been made to reduce noise emissions and experiences The book also reviews the standards and regulations that govern noise levels and the federal state and local agencies that regulate noise for the benefit safety and wellness of society at large In addition it presents the cost benefit trade offs between efforts to mitigate noise and the improvements they achieve information sources available to the public on the dimensions of noise problems and their mitigation and the need to educate professionals who can deal with these issues Noise emissions are an issue in industry in communities in buildings and during leisure activities As such Technology for a Quieter America will appeal to a wide range of stakeholders the engineering community the public government at the federal state and local levels private industry labor unions and nonprofit organizations Implementation of the recommendations in

Technology for a Quieter America will result in reduction of the noise levels to which Americans are exposed and will improve the ability of American industry to compete in world markets paying increasing attention to the noise emissions of products
