Fuller, 1984 This study describes experimental difficulties in the use of the chevron notch bend test to determine the plane strain fracture toughness K_{Ic} for brittle materials Four point flexure tests were performed on soda lime silica glass and vitreous silica in both wet and dry environments and at various loading rates Results show that an inability to produce stable crack growth in the chevron notch bend test can lead to serious overestimates of K_{Ic} as well as to significant scatter in the data It is also shown that water enhanced crack growth can reduce the measured value of K_{Ic}
