

Q.4 (a)(2) Express $p(x) = 6 + 11x + 6x^2$ as a linear combination of the following $p_1 = 2+x+4x^2$, $p_2 = 1-x+3x^2$, $p_3 = 3+2x+5x^2$.
(3)

Solution: $6 + 11x + 6x^2 = a(2+x+4x^2) + b(1-x+3x^2) + c(3+2x+5x^2)$

$$\therefore 2a + b + 3c = 6, a - b + 2c = 11, 4a + 3b + 5c = 6$$

To solve we are using augmented matrix

$$\left[\begin{array}{ccc|c} 2 & 1 & 3 & 6 \\ 1 & -1 & 2 & 11 \\ 4 & 3 & 5 & 6 \end{array} \right]$$

Vector Calculus Alice Gorguis, 2013-07-31 This text is intended for a one semester course in the Calculus of functions of several variables and vector analysis taught at college level This course is normally known as vector calculus or multi variable calculus or simply calculus III The course usually is preceded by a beginning course in linear algebra The prerequisite for this course is the knowledge of the fundamental of one variable calculus differentiation and integration of the standard functions The text includes most of the basic theories as well as many related examples and problems There are many exercises throughout the text which in my experience are more than enough for a semester course in this subject I include enough examples for each topics in each section to illustrate and help the student to practice his/her skills Also added problems that ask the student to reflect on and explore in his/her own words some of the important ideas of Vector Calculus I have included material enough to be covered during a simple semester without a hassle and it should be possible to work through the entire book with reasonable care Most of the exercises are relatively routine computations to moderate and productive problems to help the students understand the concept of each topic Each section in a chapter is concluded with a set of exercises that review and extend the ideas that was introduced in the chapter or section Computer softwares were not included in this book Most of the exercises can be solved easily by hand but I advise the students to use Mathematica or Maple to graph the functions in each problem to visualize the problem and understand it better Some of the homework might require the use of Mathematica
Vector Calculus Thomas H. Barr, 2001 **Student Solutions Manual [for] Vector Calculus** Susan Jane Colley, 2006 *Solutions Manual to accompany Analysis in Vector Spaces* Mustafa A. Akcoglu, Paul F. A. Bartha, Dzong Minh Ha, 2009-04-13 A rigorous introduction to calculus in vector spaces The concepts and theorems of advanced calculus combined with related computational methods are essential to understanding nearly all areas of quantitative science Analysis in Vector Spaces presents the central results of this classic subject through rigorous arguments discussions and examples The book aims to cultivate not only knowledge of the major theoretical results but also the geometric intuition needed for both mathematical problem solving and modeling in the formal sciences The authors begin with an outline of key concepts terminology and notation and also provide a basic introduction to set theory the properties of real numbers and a review of linear algebra An elegant approach to eigenvector problems and the spectral theorem sets the

stage for later results on volume and integration Subsequent chapters present the major results of differential and integral calculus of several variables as well as the theory of manifolds Additional topical coverage includes Sets and functions Real numbers Vector functions Normed vector spaces First and higher order derivatives Diffeomorphisms and manifolds Multiple integrals Integration on manifolds Stokes theorem Basic point set topology Numerous examples and exercises are provided in each chapter to reinforce new concepts and to illustrate how results can be applied to additional problems Furthermore proofs and examples are presented in a clear style that emphasizes the underlying intuitive ideas Counterexamples are provided throughout the book to warn against possible mistakes and extensive appendices outline the construction of real numbers include a fundamental result about dimension and present general results about determinants Assuming only a fundamental understanding of linear algebra and single variable calculus Analysis in Vector Spaces is an excellent book for a second course in analysis for mathematics physics computer science and engineering majors at the undergraduate and graduate levels It also serves as a valuable reference for further study in any discipline that requires a firm understanding of mathematical techniques and concepts

Vector Calculus Thomas H. Barr, 2001 For one semester sophomore level courses in Vector Calculus and Multivariable Calculus This brief book presents an accessible treatment of multivariable calculus with an early emphasis on linear algebra as a tool The organization of the text draws strong analogies with the basic ideas of elementary calculus derivative integral and fundamental theorem Traditional in approach it is written with an assumption that the student may have computing facilities for two and three dimensional graphics and for doing symbolic algebra
