As organizers we tried to bring together for the symposium people whose interests covered several key aspects of modern vegetation science: vegetation dynamics on shorter or longer time scales; the analysis of community data and of vegetation environment relationships in both time and space; and the functional basis of vegetation in terms of the individual plants and plant populations that it comprises. We encouraged contributors to focus on theory and models, not necessarily mathematical models but also conceptual models that might contribute to the development of theory and mathematical models. **The**
