H. Marlow, 1993-01-01 Practical and applications oriented this text explains effective procedures for performing mathematical tasks that arise in many fields including operations research engineering systems sciences statistics and economics Most of the examples and many of the 1 300 problems illustrate techniques and nearly all of the tables display reference material for procedures 1978 edition

Principles of Topology Fred H. Croom, 2016-03-17 Topology is a natural geometric and intuitively appealing branch of mathematics that can be understood and appreciated by students as they begin their study of advanced mathematical topics Designed for a one semester introduction to topology at the undergraduate and beginning graduate levels this text is accessible to students familiar with multivariable calculus Rigorous but not abstract the treatment emphasizes the geometric nature of the subject and the applications of topological ideas to geometry and mathematical analysis Customary topics of point set topology include metric spaces general topological spaces continuity topological equivalence basis subbasis connectedness compactness separation properties metrization subspaces product spaces and quotient spaces In addition the text introduces geometric differential and algebraic topology Each chapter includes historical notes to put important developments into their historical framework Exercises of varying degrees of difficulty form an essential part of the text

The Theory of Lie Derivatives and Its Applications Kentaro Yano, 2020-05-21 Differential geometry has become one of the most active areas of math publishing yet a small list of older unofficial classics continues to interest the contemporary generation of mathematicians and students This advanced treatment of topics in differential geometry first published in 1957 was praised as well written by The American Mathematical Monthly and hailed as undoubtedly a valuable addition to the literature Its topics include Spaces with a non vanishing curvature tensor that admit a group of automorphisms of the maximum order Groups of transformations in generalized spaces The study of global properties of the groups of motions in a compact orientable Riemannian space Lie derivatives in an almost complex space For advanced undergraduates and

graduate students in mathematics *The Real Number System in an Algebraic Setting* J. B.
