A FORTRAN Program for Calculating Three-dimensional, Inviscid, Rotational Flows with Shock Waves in Axial Compressor Blade Rows William T. Thompkins, 1982 **A FORTRAN Program for Calculating Three Dimensional, Inviscid and Rotational Flows with Shock Waves in Axial Compressor Blade Rows: User's Manual** William T. Jr Thompkins, Massachusetts Institute of Technology. Gas Turbine and Plasma Dynamics Laboratory, 1981 A FORTRAN IV computer program has been developed for the calculation of the inviscid transonic supersonic flow field in a fully three dimensional blade passage of an axial compressor rotor or stator Rotors may have dampers part span shrouds MacCormack s explicit time marching method is used to solve the unsteady Euler equations on a finite difference mesh This technique captures shocks and smears them over several grid points Input quantities are blade row geometry operating conditions and thermodynamic quantities Output quantities are three velocity components density and internal energy at each mesh point Other flow quantities are calculated from these variables A short graphics package is included with the code and may be used to display the finite difference grid blade geometry and static pressure contour plots on blade to blade calculation surfaces or blade suction and pressure surfaces Flows in four transonic compressor rotors have been analyzed and compared with exit flow field measurements and intra blade static density measurements obtained with a gas fluorescence technique These comparisons have generally shown that the computed flow fields accurately model the experimentally determined passage shock positions and overall aerodynamic performance The computer code was developed and generally run on a large minicomputer system a Digital Equipment Corporation PDP 11 70 with run times of two to three days The code has also been run on several main frame computers IBM 3033 IBM 360 678 UNIVAC 1110 CDC 7600 and a CRAY 1 Typical run times on an IBM 3033 have been found to be 5 10 hours **Ubiquitous Computing and Ambient Intelligence:**

Machine Learning for Indoor Localization and Navigation Saideep Tiku, Sudeep Pasricha, 2023-06-29 While GPS is the de facto solution for outdoor positioning with a clear sky view there is no prevailing technology for GPS deprived areas including dense city centers urban canyons buildings and other covered structures and subterranean facilities such as underground mines where GPS signals are severely attenuated or totally blocked. As an alternative to GPS for the outdoors indoor localization using machine learning is an emerging embedded and Internet of Things IoT application domain that is poised to reinvent the way we navigate in various indoor environments. This book discusses advances in the applications of machine learning that enable the localization and navigation of humans robots and vehicles in GPS deficient environments. The book explores key challenges in the domain such as mobile device resource limitations device heterogeneity environmental uncertainties wireless signal variations and security vulnerabilities. Countering these challenges can improve the accuracy reliability predictability and energy efficiency of indoor localization and navigation. The book identifies several novel energy efficient real time and robust indoor localization techniques that utilize emerging deep machine learning and statistical techniques to address the challenges for indoor localization and navigation. In particular the book provides comprehensive coverage of the application of machine learning to the domain of indoor localization. Presents techniques to adapt and optimize machine learning models for fast energy efficient indoor localization. Covers design and deployment of indoor localization frameworks on mobile IoT and embedded devices in real conditions.
