The Kyoto Protocol Christophe P. Vasser, 2009 This book is devoted to the The Kyoto Protocol which is a significant protocol to the international Framework Convention on Climate Change with the objective of reducing greenhouse gases that cause climate change It was adopted on 11 December 1997 by the 3rd Conference of the Parties which was meeting in Kyoto and it entered into force on 16 February 2005 As of June 2008 182 parties have ratified the protocol Of these 36 developed countries plus the EU as a party in its own right are required to reduce greenhouse gas emissions to the levels specified for each of them in the treaty representing over 61.6% of emissions from Annex I countries with three more countries intending to participate One hundred thirty seven 137 developing countries have ratified the protocol including Brazil China and India but have no obligation beyond monitoring and reporting emissions The Kyoto Protocol separates countries into two groups Annex I includes developed nations while Non Annex I refers to developing countries Emission limitations are only placed on Annex I countries Non Annex I nations participate by investing in projects that lower emissions in their own countries For these projects they earn carbon credits These credits can be traded or sold to Annex I countries which allow them a higher level of maximum carbon emissions for that period

The Kyoto Protocol in the EU Leonardo Massai, 2011-05-04 The participation of the European Community and the Member States in the international climate change regimes is a complex issue In the case of the Kyoto Protocol this is rendered more complicated by the fact that for the purposes of Article 4 of the Kyoto Protocol the membership of the European Community and Member States is frozen at a particular point in time The result of this is that under International Law the European Community and a part of the Member States EU15 have agreed to jointly fulfil some of those obligations whereas under Community Law all Member States share a certain degree of responsibility to meet the obligations created by the Kyoto Protocol This book analyses in great detail the Kyoto Protocol and its obligations as well as the discrepancies between International Law and Community

Climate Change Policy after Kyoto Warwick J. McKibbin, Peter J. Wilcoxon, 2002-12-16 The Kyoto Protocol represents nearly a decade of international effort to reduce carbon emissions While the treaty is the product of enormous international political effort it has not been ratified by any major greenhouse emitter and it has been rejected by the United States In this controversial new book Warwick J McKibbin and Peter Wilcoxon argue that the current approach of international negotiations on the Kyoto Protocol is going completely in the wrong direction In *Climate Change Policy after Kyoto* they attempt to steer the policy debate toward a realistic blueprint for effective policy The authors believe that managing uncertainty particularly the future costs of any plan is key to realistic climate policy They maintain that sustainable policy should meet four basic criteria it should slow down carbon dioxide emissions where it is cost effective to do so compensate those who are hurt economically require a high degree of consensus both domestically and internationally and allow countries to enter the program easily and continue to participate even if they drop out of the agreement at certain times The book summarizes the current state of knowledge about climate change and discusses the history of negotiations since 1992 in the process identifying the Kyoto Protocol as the wrong approach to the problem It outlines important insights that economic theory offers for the design of climate policy and uses those insights to develop a simple framework that will reduce greenhouse gas emissions while guaranteeing that short run costs of compliance will not be excessive The authors conclude by outlining a process by which international negotiations on climate control can proceed to an agreement that is both durable and feasible for all nations The Kyoto Protocol and Its Economic Implications United States. House. Committee on Commerce. Subcommittee on Energy and Power, 1998 **The Kyoto Protocol** Irina Hergenröder, 2007-03-01 Seminar paper from the year 2007 in the subject Environmental Sciences grade 1 7 University of Applied Sciences Constanze course Environmental Economics language English abstract The debate around the climate policy of the earth is absolutely one of most complicated and most important of our time even if it owns no big public lobby of spectacular events Some small island states in the South Pacific are worried by the forecast increase of the sea level above their living space Again others see in the warming of the terrestrial atmosphere only one of the regularly returning climate

variations and no reason for concern Hence it is even more astonishing that one has succeeded in spite of these opinion differences in bringing this discourse in Kyoto to a result and in negotiating a protocol which supports the process The result of the discussion was in 1997 the Kyoto Protocol which is to be seen till the present as a milestone in international climate policy For a long time it was uncertain whether it one day will come into effect however it has The Kyoto Protocol obliged from the 16th February 2005 after many years tough negotiations more than 30 industrial states under international law to reduce their greenhouse gas emissions Concerning this event the following questions arise what does the Kyoto Protocol signify What does it contain and how effective can it really be The present work looks at these questions Firstly the natural and the anthropogenic greenhouse effect and the following predictions should be shown as bases to make clear the necessity of active climate protection policy Afterwards the Kyoto Protocol is explained in its climate political connections contents and instruments and in the end benefits and critical points will be shown In my opinion criticism is necessary to allow a comprising assessment of the protocol Finally it must be emphasized that with the given time a complete representation of such a complicated subject area will not be possible Therefore I will explain the most important issues and give a general overview rather than go into details in order to treat the subject as the whole

Reading the Kyoto Protocol Raoul Weiler, 2005 The Kyoto Protocol became law in February 2005 eight years after its conception as a framework for reducing emissions and a full four years after the United States abandoned it But while President George W Bush embarrassed much of the scientific community by challenging the veracity of the greenhouse effect and thus the impetus for Kyoto officials elsewhere expressed far different concerns Reading the Kyoto Protocol explores their qualms and objections to everything from Kyoto s controversial policies on emissions trading to the question of a post Kyoto era Contributors include internationally known philosophers researchers and environmentalists

The Kyoto Protocol and Beyond Wybe Th. Douma, Leonardo Massai, Massimiliano Montini, 2014-11-28 I had the pleasure of participating at the two conferences which form the basis of this book as a chairman at the 2007 The Hague Conference Tackling Climate Change An appraisal of the Kyoto Protocol and options for the future and as a speaker at the 2006 Siena Conference The Kyoto Protocol and beyond a legal perspective I would like to thank my colleagues Wybe Douma Leonardo Massai and Massimiliano Montini for those opportunities and although I was unfortunately unable to contribute a paper to this book due to time constraints I am glad to be able to say a few words on the issue by means of this foreword The timing of the two conferences was well chosen the period between the Siena Conference June 2006 and The Hague Conference March 2007 encapsulated perfectly the period of the drafting the presentation and the approval of the Integrated Energy and Climate Change Package as presented by the European Commission on the 10 of January 2007 and as approved by the Spring European Council of the 8 and 9 of March 2007 The importance of the Commission s package and the Council s conclusions must be strongly emphasized They set at the EU level legally binding targets regarding the reduction of greenhouse gas of energy and biofuels
