Decentralized Approaches of Information Allocation in Information Exchange Networks* Sven Grolik, 2012-02-24 The use of modern planning and optimization systems for process synchronization in value networks requires the optimal information exchange between the entities involved The central focus of Sven Grolik's study is the development of efficient mechanisms for the coordination of information allocation by the example of interconnected transportation marketplaces Unlike traditional information allocation algorithms the

algorithms developed in his analysis are based on update mechanisms which maintain a weak consistency of replicated information in the network Sven Grolik shows that these algorithms enable savings concerning the update costs as well as increase the performance within the network but at the same time guarantee compliance with quality of service levels concerning the currency of information The focus of this work is the development of decentralized online algorithms which make a logically distributed computation possible on the basis of local information The development of these innovative algorithms is based on approaches of multi agent system theory as well as distributed simulated annealing techniques

Advanced Robust and Nonparametric Methods in Efficiency Analysis Cinzia Daraio,Léopold Simar,2007-04-10
 Providing a systematic and comprehensive treatment of recent developments in efficiency analysis this readable book makes available an intuitive yet rigorous presentation of advanced nonparametric and robust methods This flexible toolbox can be used in theories based on the neoclassical theory of production and its alternatives including

evolutionary theories The methods are complemented by empirical analysis of three different economic fields scientific research mutual funds industry and the insurance sector The research demonstrates the utility of the toolbox for a wide range of economic issues including the analysis of economies of scale and scope dynamics of age and agglomeration effects trade offs in production and service activities and explanations of efficiency differentials Of interest to applied economists broadly this book will also be of interest to those focused on Operations Research and or Management Science *Economic Analysis and Policy*, 1996 *The Internet of Products* Robert Neumann, 2012-11-27 This study approaches the difficult problem of providing Internet users with a completely transparent view on electronic markets from a product information accessibility point of view Robert Neumann analyzes economic ecological and societal gains of openly accessible product information in the form of theoretical models Though many aspects of very different research disciplines have to be investigated to gain a holistic view on the Internet of Products this thesis reduces the range of involved research topics to product information discoverability related questions *Advances in Carbohydrate Chemistry*, 1964-01-01 *Advances in Carbohydrate Chemistry* *Topics in Microeconomics* Elmar Wolfstetter, 1999-10-28 This book in microeconomics focuses on the strategic analysis of markets under imperfect competition incomplete information and incentives Part I of the book covers imperfect competition from monopoly and regulation to the strategic analysis of oligopolistic markets Part II explains the analytics of risk stochastic dominance and risk aversion supplemented with a variety of applications from different areas in economics Part III focuses on markets and incentives under incomplete information including a comprehensive introduction to the theory of auctions which plays an important role in modern economics **The Economics, Concept, and Design of Information Intermediaries** Frank Rose, 2012-12-06 The Internet provides an infrastructure that makes the steadily increasing amount of information accessible efficiently quickly and inexpensively Closely connected with this opportunity is the danger that the available information will over charge the individual information seeker s capability to process the information and to judge its quality In this situation information intermediaries can take upon the role of an expert and a guarantor of quality similar to intermediaries in markets for physical goods or finances Thus information intermediaries can be a trust worthy information processing third party mediating between information seekers and information sources The current technological development has created information technologies that are capable to efficiently process large amounts of information However the provision of intermediation services necessitates a thorough examination of the basic principles underlying the economics of information intermediaries as well as a sound foundation on information technologies The present work by Frank Rose addresses the fundamental question concerning the economics of information intermediaries by means of an abstract model The model focuses on services that concentrate on the search and mediation of information and identifies the essential influencing factors of the intermediary s environment The model is then employed to investigate the impact of environmental conditions on the information intermediary on the one hand and the

optimal strategy of the information intermediary as a reaction to environmental conditions on the other hand **Dionysian Economics** Benjamin Ward, 2016-10-03 Nietzsche distinguished between two forces in art Apollonian which represents order and reason and Dionysian which represents chaos and energy An ideal work of art combines these two characteristics in a believable relatable balance Economists Ward argues have operated for too long under the assumption that their work reflects scientific Apollonian principals when these simply do not or cannot apply constants in economics stand in for variables mathematical equations represent the simplified ideal rather than the complex reality and the core scientific principal of replication is all but ignored In Dionysian Economics Ward encourages economists to reintegrate the standard rigor of the scientific method into their work while embracing the fact that their prime indicators come from notoriously chaotic and changeable human beings Rather than emphasizing its shortfalls compared to an extremely Apollonian science such as physics economics can aspire to the standards of a science that accounts for considerable Dionysian variation such as biology The book proposes that economists get closer to their dynamic objects of study that they avoid the temptation to wish away dynamic complexity by using simplifying assumptions and that they recognize the desire to take risks as fundamentally human
