Vascular Surgery Rodney A. White, MD, Larry H. Hollier, 2008-04-15 This second edition of a very successful vascular surgery text was developed in order to address significant changes that have occurred in contemporary vascular surgery and to highlight new information that has developed regarding vascular imaging interventional and endovascular procedures The overall length of the text is slightly shorter than the first edition with relevant core chapters being retained to emphasize the

basic science nature of the text with approximately 60% of the material undergoing major revisions or being new chapters. The significant change from the first text is an emphasis on vascular pathology and physiology that is relevant to current practice including information that is currently included on the vascular board examinations. A new emphasis on endovascular therapies has been added by including five chapters on endovascular techniques and an additional section with six chapters comparing conventional vascular reconstruction to endovascular methods. These new chapters address the most important issue in contemporary vascular surgery i.e. the role of endovascular methods in treating vascular lesions and the impact that this has on training and credentialing. A unique aspect of this book differentiating it from other texts is a comparison of conventional methods with the endovascular techniques. Overall the text provides a comprehensive perspective of contemporary vascular surgery and future perspectives. The authors are preeminent in the field and are most capable for addressing the assigned topics with the goals being to provide an updated and forward looking text that accommodates the needs of practicing and training vascular surgeons.

Vessel Health and Preservation: The Right Approach for Vascular Access Nancy L. Moureau, 2024-12-28 This second edition offers updated and revised information on vessel health and preservation VHP. It presents a model of care and systematic application of vascular access and administration of intravenous treatment to show how establishing and maintaining a route to the bloodstream with optimal methods is essential for patients in acute care today. This model concept was first published in poster form in 2008 and in JVA in 2012 which has received a great deal of attention especially in the US, UK and Australia. Until now little thought has been given to an intentional process to guide selection, insertion and management of vascular access devices (VADs) and by default actions are based on crisis management when a quickly selected VAD fails. The book details how VHP establishes a framework or pathway model for each step of the patient experience intentionally guiding, improving and eliminating risk when possible. The evidence points to the fact that reducing fragmentation, establishing a pathway and teaching the process to all stakeholders reduces complications with intravenous therapy, improves efficiency and diminishes cost. As such this book has become a strong point of reference appealing to vascular access specialists, bedside nurses, physicians and other health professionals. Few authoritative guides provide the depth and descriptive evidence included in this VHP model of care suitable for hospital administrators, directors, educators and others to apply within their services.
