Federal Register ,2013-07 **Access Management** Donald L. Bowman,1998 This report analyzes comprehensive highway access management programs and looks at the potential benefits and legal limits to Virginia adopting such a program to replace Virginia s rather limited site specific permitting process In 1942 Virginia passed legislation defining the right of private homeowners and commercial establishments to make connections to state highways Va Code 33 1 197 private entrances and 33 1 198 commercial entrances The statutes established a permit process for commercial and private entrances to state highways administered by VDOT in accordance with the Minimum Standards of Entrances to State Highways However the Minimum Standards do not establish a comprehensive access management plan for Virginia s highway systems and have been criticized for being too permissive In 1980 Colorado became the first state to enact a comprehensive highway access management code with strict safety and traffic criteria for private accesses to public highways Since that time Florida and New Jersey have also adopted comprehensive programs However Virginia s access management process continues to be a case by case permit review process This report considers the relative benefits of access management analyzes the legal obstacles in Virginia for a comprehensive program and discusses options Virginia

might consider The report also includes an analysis of Virginia's legal and regulatory framework within which an access management program would operate and two alternative models for access management regulation to assist policy makers

Transportation Planning Handbook ITE (Institute of Transportation Engineers), Michael D. Meyer, 2016-07-11 A multi-disciplinary approach to transportation planning fundamentals The Transportation Planning Handbook is a comprehensive practice oriented reference that presents the fundamental concepts of transportation planning alongside proven techniques This new fourth edition is more strongly focused on serving the needs of all users the role of safety in the planning process and transportation planning in the context of societal concerns including the development of more sustainable transportation solutions The content structure has been redesigned with a new format that promotes a more functionally driven multimodal approach to planning design and implementation including guidance toward the latest tools and technology The material has been updated to reflect the latest changes to major transportation resources such as the HCM MUTCD HSM and more including the most current ADA accessibility regulations Transportation planning has historically followed the rational planning model of defining objectives identifying problems generating and evaluating alternatives and developing plans Planners are increasingly expected to adopt a more multi-disciplinary approach especially in light of the rising importance of sustainability and environmental concerns This book presents the fundamentals of transportation planning in a multidisciplinary context giving readers a practical reference for day to day answers Serve the needs of all users Incorporate safety into the planning process Examine the latest transportation planning software packages Get up to date on the latest standards recommendations and codes Developed by The Institute of Transportation Engineers this book is the culmination of over seventy years of transportation planning solutions fully updated to reflect the needs of a changing society For a comprehensive guide with practical answers The Transportation Planning Handbook is an essential reference

Addressing I-81 Transportation Needs, 2007 Development of Guidelines for In-roadway Warning Lights E. D.

Arnold, 2004 The purpose of this research was to develop guidelines for IRWLs that the Virginia Department of Transportation VDOT could use statewide to ensure uniformity The guidelines include both planning and design guidelines Planning guidelines focus on when and where IRWLs are needed or justified Design guidelines focus on design features of IRWLs and their components The scope of the research was limited to a review of existing guidelines and of experiences with existing IRWLs

Improving Night Work Zone Traffic Control Benjamin H. Cottrell, 1999 The objective of this study was to examine traffic control for night work zones from the perspective of both agencies and motorists This was accomplished by investigating practices of state departments of transportation identifying the problems associated with traffic control for night work zones and identifying potential strategies to resolve them Reduced visibility driver impairment or inattention inadequate lighting and difficulty in maintaining traffic control devices are common problems identified with night work

zones based on surveys of state departments of transportation and residencies within the Virginia Department of Transportation Having police present making workers more visible using drums in the taper maintaining traffic control devices and providing adequate lighting were common solutions Based on the review of work zones traffic control for night work zones is generally adequate Common problem areas were properly establishing work zones based in accordance with the Virginia Work Area Protection Manual maintaining the traffic control devices and properly aiming and aligning lighting to avoid glare Although there is a perception that night work zones are less safe than daytime work zones evidence to substantiate this perception such as higher accident rates was not available because of a lack of accurate traffic exposure data Based on a limited amount of data there was no evidence of the perceived higher speeds at night

Examination of Core Highway Capacity Manual Concepts Brian L. Smith, 2002 The Highway Capacity Manual HCM is one of the most widely used traffic engineering guidance documents in the world It was originally published in 1950 and has been under constant revision since Unfortunately due to past cost and time constraints associated with traffic data collection much of information in the manual is based on research conducted using relatively small data sets This calls into question the statistical significance of some of the manual s material The Virginia Smart Travel Laboratory is a nationally unique research facility The distinguishing feature of the laboratory is its direct connection to operational VDOT transportation management systems This gives the laboratory access to unprecedented quantities of traffic data The purpose of this research project is to use this data to investigate a key concept of the HCM freeway traffic lane distribution An important consideration of transportation management is the distribution of lane use by vehicles This distribution plays a significant role in how traffic management devices such as variable message signs lane control signals and ramp meters are utilized Unfortunately according to the HCM when two or more lanes are available for traffic in a single direction the distribution in lane use varies widely there are not typical lane distributions An investigation of this concept using a large set of data from freeways in the urbanized Hampton Roads region of Virginia led to the following conclusions The distribution of vehicles along a specific link of a freeway system does tend to follow predictable trends by time of day A missing data estimation procedure can be developed that exploits the consistency of lane distribution by time of day and location This estimation methodology proved to accurately estimate missing detector data generally producing results within the 6% 8% error range Finally the report presents the following recommendations to VDOT VDOT should collect and archive traffic data at the lane level to support future applications such as the missing data estimation methodology VDOT should use the lane distribution based missing data estimation methodology described in this report in Smart Traffic Centers and permanent count stations located on freeways VDOT should formally transmit this report to TRB for committee consideration as the next version of the HCM is developed

Traffic Engineering Manual Florida. Bureau of Traffic Engineering, 1996 Assessment of Advanced Warning Signs for Flagging Operations Steven L. Jones, 1999 The Virginia Department of Transportation VDOT and several other state departments of transportation have expressed interest in modifying the advanced warning sign for work zone flagging operations The advanced warning sign is intended to alert drivers to the presence of flaggers and to prepare drivers to stop if necessary prior to reaching work zone operations The current or existing flagger sign depicts a symbol of a worker holding a flag the proposed sign depicts a worker holding a STOP SLOW paddle The purpose of this research project was to assess and compare the motoring public s understanding of the existing and proposed advanced warning signs for work zone flagging operations The study consisted of a literature review and a survey of motorists Over 4 500 multiple choice surveys were mailed out to randomly selected Virginia residents Open ended questionnaires were also distributed to select groups to provide a comparison with the results of the multiple choice responses The survey results indicated that the proposed sign was for the most part understood by Virginia drivers and appeared to be effective at conveying its message This study recommends that 1 VDOT ask the FHWA to allow the use of the proposed sign in work zone operations throughout Virginia and 2 VDOT along with others petition the FHWA to add the proposed sign to the MUTCD Using All-way Stop Control for Residential Traffic Management Benjamin H. Cottrell, 1996 All way or multiway stop signs are perhaps the most controversial form of residential traffic control Residents are likely to request all way stop signs more frequently than any other form of control Stop signs are thought of as panaceas for many traffic problems The Virginia Department of Transportation VDOT receives requests for all way stop control AWSC on residential streets primarily to slow traffic but also to reduce cut through traffic The objective of this study was to evaluate the effectiveness of AWSC for residential traffic management The study was limited to the use of AWSC on local residential streets A comprehensive review of the literature and a questionnaire survey of selected traffic engineering agencies were conducted to identify current use of AWSC Three case studies using a series of AWSC intersections to reduce cut through traffic on local residential streets were analyzed The majority of traffic engineering agencies use AWSC warrants from the Manual on Uniform Traffic Control Devices MUTCD Several agencies use modified MUTCD warrants or a rating system because the MUTCD warrants appear inappropriate for residential streets with lower traffic volumes When installed at a series of intersections AWSC was effective in reducing cut through volumes at the three locations VDOT should continue to use a series of AWSC intersections as one tool to decrease cut through traffic on
