

SureBackup overview

To perform live testing of guests, SureBackup® will isolate live images from the rest of the production environment and run pre-defined tests against them, as described in below illustration.

This is made possible using different Veeam features such as Virtual Lab, Instant VM Recovery® and application groups in conjunction with specific testing scenario.

Infrastructure concerns

SureBackup is relying on Veeam Instant VM Recovery feature. This means that the repository must offer enough performance to concurrently start as many concurrent IVMR sessions as configured in the SureBackup job and the application group.

For example, if a SureBackup job is configured to test three VMs in parallel and an application group is configured with two VMs, then the repository must offer enough IOPS to run five VMs at the same time.

Before configuring SureBackup jobs, it is recommended to run Instant VM Recovery sessions to test the repository and make sure it will sustain the desired load.
