

THE AIR WHICH PRESSURE IN THE TUBE IS EXERCISED ON

Objectives

The atmosphere has weight as well as horizontal dimensions. For a more complete understanding of various atmospheric self-regulating conditions, it is necessary, e.g., to explain atmospheric fluid flow within places by pressure and temperature under the same weight (homogeneity in the horizontal) atmosphere. The atmosphere is subject to pressure, temperature, in which various conditions and conditions exist, showing that atmospheric system through its own self-regulating mechanism.

After completing this investigation, you should be able to:

1. Describe the vertical atmospheric pressure of the atmosphere in the atmosphere the "vertical" layer and in the horizontal atmosphere.
2. Compare the temperature profile specified by the U.S. Standard atmosphere with actual conditions of the lower atmosphere.

Background

Figure 1 shows the average vertical temperature profile of the earth's atmosphere as a function of altitude above Earth's surface.
