This book provides an investigative approach to how machine learning is helping to maintain and secure smart cities including principal uses such as smart monitoring privacy reliability and public protection The authors cover important areas and issues around implementation roadblocks ideas and opportunities in smart city development The authors also include new algorithms architectures and platforms that can accelerate the growth of smart city concepts and applications Moreover this book provides details on specific applications and case studies related to smart city infrastructures big data management and prediction techniques using machine learning

Conflict Resolution in Water Resources and Environmental Management Keith W. Hipel,Liping Fang,Johannes Cullmann,Michele Bristow,2015-04-13 The latest developments regarding the theory and practice of effectively resolving conflict in water resources and environmental management are presented in this book by respected experts from around the globe Water conflicts are particularly complex and challenging to solve because water and environmental issues span both the societal realm in which people and organizations interact and the physical world which sustains all human activities For instance when large scale water diversions take place across political jurisdictions conflicts may ensue among stakeholders within and across regions while the water transfers may cause severe damage to sensitive ecological systems Therefore to arrive at realistic and fair resolutions one must take into account not only the economics and politics of the situation but also the water quantity and quality changes that may occur within the altered hydrological system as well as the ecosystems contained therein When the effects of climate change and the closely connected activities of energy production and usage are also considered the complexity of the problem becomes even greater and messier Accordingly one must adopt an integrative and adaptive approach to water and environmental governance that specifically recognizes the conflicting value systems of stakeholders including nature and future generations even though they are not present at the bargaining table The 16 chapters in this leading edge book are written by authors who presented their original research at the International Conference on Water Resources and Environment Research ICWRER 2013 which was held in Koblenz Germany from June 3rd to 7th 2013 and subsequently submitted expanded versions of their research for review and publication in this timely book The rich range of contributions are put into perspective in the first chapter and then categorized into four main interconnected parts Part I Management and Evaluation Part II Global Trans boundary and International Dimensions Part III Consensus building Bargaining and Negotiation Part IV Ecological and Socio economic Impacts

System Robustness Analysis in Support of Flood and Drought Risk Management M.J.P. Mens,2015-01-06 Floods and droughts have an increasing impact on societies worldwide It is unlikely that the provision of flood protection

infrastructure and reservoirs will eliminate this problem especially as extreme events are expected to increase in probability and magnitude as a result of climate change For this reason the focus of water management has shifted to a risk based approach in recent years but this also has its limitations This book examines system robustness as a new perspective on flood and drought risk management The concept of robustness is familiar from other areas such as engineering and biology When a system is robust it can remain functioning even when some components fail Areas prone to flooding or drought can be understood as systems and this book makes the concept of robustness operational by proposing quantifiable criteria These criteria were tested in two case studies of flooding and two of drought which demonstrate the applicability of the framework and provide insight into the system characteristics that influence system robustness The book will contribute to decision making in flood and drought risk management by providing additional decision criteria and will be of interest to all those whose work involves the management of disastrous and uncertain flood and drought events Impact of Climate Change on the Human Living Environment Zengyu Hu,Yanfang Sang,Qiming Zhou,Zheng Duan, Climate change has been attracting extensive attention worldwide due to its significant and irreversible impacts on the human living environments including hydrometeorological disasters freshwater availability land use and land change urbanization food production disease outbreaks and many other aspects It has caused huge socio economic losses and is the utmost obstacle to the sustainable development of human society Therefore addressing the above problems is an urgent and necessary issue to explore the impacts of climate change on different aspects of the human living environment as an important basis to adopt effective adaptive measures and actions for mitigation of climate change impacts
