Web Services Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju, 2010-12-04 Like many other incipient technologies Web services are still surrounded by a substantial level of noise This noise results from the always dangerous combination of wishful thinking on the part of research and industry and of a lack of clear understanding of how Web services came to be On the one hand multiple contradictory interpretations are created by the many attempts to realign existing technology and strategies with Web services On the other hand the emphasis on what could be done with Web services in the future often makes us lose track of what can be really done with Web services today and in the short term These factors make it extremely difficult to get a coherent picture of what Web services are what they contribute and where they will be applied Alonso and his co authors deliberately take a step back Based on their academic and industrial experience with middleware and enterprise application integration systems they describe the fundamental concepts behind the notion of Web services and present them as the natural evolution of conventional middleware necessary to meet the challenges of the Web and of B2B application integration Rather than providing a reference guide or a how to write your first Web service kind of book they discuss the main objectives of Web services the challenges that must be faced to achieve them and the opportunities that this novel technology provides Established as well as recently proposed standards and techniques e g WSDL UDDI SOAP WS Coordination WS Transactions and BPEL are then examined in the context of this discussion in order to emphasize their scope benefits and shortcomings Thus the book is ideally suited both for professionals considering the development of application integration solutions and for research and students interesting in understanding and contributing to the evolution of enterprise application technologies

Web Services Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju, 2003-09-04 Like many other incipient technologies Web services are still surrounded by a substantial level of noise This noise results from the always dangerous combination of wishful thinking on the part of research and industry and of a lack of clear understanding of how Web services came to be On the one hand multiple contradictory interpretations are created by the many attempts to realign existing technology and strategies with Web services On the other hand the emphasis on what could be done with Web services in the future often makes us lose track of what can be really done with Web services today and in the short term These factors make it extremely difficult to get a coherent picture of what Web services are what they contribute and where they will be applied Alonso and his co authors deliberately take a step back Based on their academic and industrial experience with middleware and enterprise application integration systems they describe the fundamental concepts behind the notion of Web services and present them as the natural evolution of conventional middleware necessary to meet the challenges of the Web and of B2B application integration Rather than providing a reference guide or a how to write your first Web service kind of book they discuss the main objectives of Web services the challenges that must be faced to achieve them and the opportunities that this novel technology provides

Established as well as recently proposed standards and techniques e.g. WSDL, UDDI, SOAP, WS Coordination, WS Transactions and BPEL are then examined in the context of this discussion in order to emphasize their scope, benefits and shortcomings. Thus the book is ideally suited both for professionals considering the development of application integration solutions and for research and students interested in understanding and contributing to the evolution of enterprise application technologies.

Web Services: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2018-12-07. Web service technologies are redefining the way that large and small companies are doing business and exchanging information. Due to the critical need for furthering automation, engagement and efficiency, systems and workflows are becoming increasingly more web-based. Web Services: Concepts, Methodologies, Tools and Applications is an innovative reference source that examines relevant theoretical frameworks, current practice guidelines, industry standards and standardization and the latest empirical research findings in web services. Highlighting a range of topics such as cloud computing, quality of service and semantic web, this multi-volume book is designed for computer engineers, IT specialists, software designers, professionals, researchers and upper level students interested in web services architecture, frameworks and security. *Web Services Security Development and Architecture: Theoretical and Practical Issues* Guti rrez, Carlos A., Fern ndez-Medina, Eduardo, Piattini, Mario, 2010-01-31. This book's main objective is to present some of the key approaches, research lines and challenges that exist in the field of security in SOA systems. Provided by publisher.

Service-Oriented Computing - ICSOC 2005 Boualem Benatallah, Fabio Casati, Paolo Traverso, 2005-11-30. This book constitutes the refereed proceedings of the Third International Conference on Service Oriented Computing ICSOC 2005 held in Amsterdam, The Netherlands in December 2005. The 32 revised full papers and 14 short papers presented together with 8 industrial and demo papers were carefully reviewed and selected from over 200 submissions. The papers are organized in topical sections on vision, papers, service specification and modelling, service design and validation, service selection and discovery, service composition and aggregation, service monitoring, service management, semantic Web and grid services as well as security, exception handling and SLAs. Emerging Trends in Intelligent Computing and Informatics Faisal

Saeed, Fathey Mohammed, Nadhmi Gazem, 2019-11-01. This book presents the proceedings of the 4th International Conference of Reliable Information and Communication Technology 2019 (IRICT 2019) which was held in Pulai Springs Resort, Johor, Malaysia on September 22-23, 2019. Featuring 109 papers, the book covers hot topics such as artificial intelligence and soft computing, data science and big data analytics, internet of things (IoT), intelligent communication systems, advances in information security, advances in information systems and software engineering. **Exploring Enterprise Service Bus in the Service-Oriented Architecture Paradigm** Bhadoria, Robin Singh, Chaudhari, Narendra, Tomar, Geetam Singh, Singh, Shailendra, 2017-02-14. Web browsing would not be what it is today without the use of Service Oriented Architecture (SOA). Although much has been written about SOA methodology, this emerging platform is continuously under development.

Exploring Enterprise Service Bus in the Service Oriented Architecture Paradigm is a detailed reference source that examines current aspects and research methodologies that enable enterprise service bus to unify and connect services efficiently on a common platform. Featuring relevant topics such as SOA reference architecture, grid computing, applications, complex event computing, and Java business integration, this is an ideal resource for all practitioners, academicians, graduate students, and researchers interested in the discoveries on the relationship that Service Oriented architecture and enterprise service bus share.

Collaborative Product and Service Life Cycle Management for a Sustainable World Richard Curran, Shuo-Yan Chou, Amy J. C. Trappey, 2008-08-31 Collaborative Product and Service Life Cycle Management for a Sustainable World gathers together papers from the 15th ISPE International Conference on Concurrent Engineering CE2008 to stimulate the new thinking that is so crucial to our sustained productivity enhancement and quality of life. It is already evident in this new century that the desire for sustainable development is increasingly driving the market to reach for new and innovative solutions that more effectively utilize the resources we have inherited from previous generations with the obvious responsibility to future generations. Human productivity and progress can be positively engineered and managed in harmony with the provision and needs of our natural environment. One century on from the industrial revolution, this is now the time of the sustainable revolution requiring holistic technological process and people integrated solutions to sustained socio-economic enhancement.

Handbook of Network and System Administration Jan Bergstra, Mark Burgess, 2011-08-11 System administration is about the design, running, and maintenance of human computer systems. Examples of human computer systems include business enterprises, service institutions, and any extensive machinery that is operated by or interacts with human beings. System administration is often thought of as the technological side of a system: the architecture, construction, and optimization of the collaborating parts, but it also occasionally touches on softer factors such as user assistance, help desks, ethical considerations in deploying a system, and the larger implications of its design for others who come into contact with it. This book summarizes the state of research and practice in this emerging field of network and system administration in an anthology of chapters written by the top academics in the field. The authors include members of the IST EMANICS Network of Excellence in Network Management. This book will be a valuable reference work for researchers and senior system managers wanting to understand the essentials of system administration, whether in practical application of a data center or in the design of new systems and data centers. Covers data center planning and design. Discusses configuration management. Illustrates business modeling and system administration. Provides the latest theoretical developments.

Web Engineering David Lowe, Martin Gaedke, 2011-04-06 Over the last few years, Web Engineering has begun to gain mainstream acceptance within the software engineering, IT, and related disciplines. In particular, both researchers and practitioners are increasingly recognizing the unique characteristics of Web systems and what these characteristics imply in terms of the approaches we take to Web systems development and deployment in practice. A scan of the publications in related conference

proceedings and journals highlights the diversity of the discipline areas which contribute to both the richness and the complexity of Web Engineering The 5th International Conference on Web Engineering ICWE2005 held in Sydney Australia extends the traditions established by the earlier conferences in the series ICWE2004 in Munich Germany ICWE2003 in Oviedo Spain ICWE2002 in Santa Fe Argentina and ICWE2001 in Caceres Spain Not only have these conferences helped disseminate cutting edge research within the field of Web Engineering but they have also helped define and shape the discipline itself The program we have put together for ICWE2005 continues this evolution Indeed we can now begin to see the maturing of the field For possibly the first time there was very little debate within the Program Committee about which papers were in and out of scope and much more debate as to the each papers contributions to the field

Business Process Management Workshops Johann Eder, Schahram Dustdar, 2006-08-29 This book constitutes the refereed proceedings of 6 international workshops held in conjunction with the 4th International Conference on Business Process Management BPM 2006 in Vienna Austria in September 2006 The 40 revised full papers presented were carefully reviewed and selected from a total of 94 overall submissions to six international workshops

Enterprise Knowledge Infrastructures Ronald Maier, Thomas Hädrich, René Peinl, 2009-04-21 Success of an organization is increasingly dependent on its capability to create an environment in order to improve productivity of knowledge work This book focuses on the concepts models and technologies that are used to design and implement such an environment It develops the vision of a modular yet highly integrated enterprise knowledge infrastructure and presents an idealized architecture replete with current technologies and systems The most important streams of technological development that are covered in the book are communication collaboration document and content management e learning enterprise portals business process management information life cycle management information retrieval and visualization knowledge management mobile computing application and network infrastructure Semantic Web and social software It includes learning goals exercises and case examples that help the reader to easily understand and practice the concepts

Computer, Informatics, Cybernetics and Applications Xingui He, Ertian Hua, Yun Lin, Xiaozhu Liu, 2011-12-01 The Conference on Computer Informatics Cybernetics and Applications 2011 aims to facilitate an exchange of information on best practices for the latest research advances in the area of computer informatics cybernetics and applications which mainly includes computer science and engineering informatics cybernetics control systems communication and network systems technologies and applications others and emerging new topics

Web Information Systems and Mining Zhiguo Gong, Xiangfeng Luo, Junjie Chen, Jingsheng Lei, Fu Lee Wang, 2011-09-25 The two volume set LNCS 6987 and 6988 constitutes the refereed proceedings of the International Conference on Web Information Systems and Mining WISM 2011 held in Taiyuan China in September 2011 The 112 revised full papers presented were carefully reviewed and selected from 472 submissions The second volume includes 56 papers organized in the following topical sections management information systems semantic Web and ontologies Web content

mining Web information classification Web information extraction Web intelligence Web interfaces and applications Web services and e learning and XML and semi structured data

Semantic Service Provisioning Dominik Kuropka, Peter Tröger, Steffen Staab, Mathias Weske, 2008-04-19 Service oriented computing has recently gained extensive momentum in both industry and academia and major software vendors hook on to the service paradigm and tailor their software systems towards services in order to accommodate ever changing process and product requirements in today's dynamic market environments While dynamic binding of services at runtime was identified as a core functionality of service based environments as far back as 2000 its industrial strength implementation has yet to be achieved The main reason for this is the lack of rich service specifications concepts and tools to process them This book introduces advanced concepts in service provisioning and service engineering including semantic concepts dynamic discovery and composition and illustrates them in a concrete business use case scenario To prove the validity of the concepts and technologies a semantic service provisioning reference architecture framework as well as a prototypical implementation of its subsystems and a prototypical realization of a proper business scenario are presented Thus the book goes way beyond current service based software technologies by providing a coherent and consistent set of technologies and systems functionality that realizes advanced concepts in service provisioning Both the use case scenario and the provisioning platform have already been substantiated and implemented by the EU funded Adaptive Services Grid project The book therefore presents state of the art research results that have already passed a real industrial implementation evaluation which is based on the work of over 20 European partners cooperating in the field of semantic service provisioning

Uncovering Essential Software Artifacts through Business Process Archeology Perez-Castillo, Ricardo, Piattini, Mario G., 2013-10-31 Corporations accumulate a lot of valuable data and knowledge over time but storing and maintaining this data can be a logistic and financial headache for business leaders and IT specialists *Uncovering Essential Software Artifacts through Business Process Archaeology* introduces an emerging method of software modernization used to effectively manage legacy systems and company operations supported by such systems This book presents methods techniques and new trends on business process archeology as well as some industrial success stories Business experts professionals and researchers working in the field of information and knowledge management will use this reference source to efficiently and effectively implement and utilize business knowledge

Handbook of Research on Service-Oriented Systems and Non-Functional Properties: Future Directions Reiff-Marganiec, Stephan, 2011-12-31 Services and service oriented computing have emerged and matured over the last decade bringing with them a number of available services that are selected by users and developers and composed into larger applications The Handbook of Research on Non Functional Properties for Service Oriented Systems Future Directions unites different approaches and methods used to describe map and use non functional properties and service level agreements This handbook which will be useful for both industry and academia provides an overview of existing research and also sets clear directions for future work

Information Technology for Balanced Manufacturing Systems Weiming Shen, 2007-03-07 The manufacturing sector has been facing major challenges as it undergoes revolutionary changes fuelled by new and sophisticated demands from customers global competition distribution of manufacturing and marketing activities and technological advances In order to address these challenges manufacturing enterprises need to change the way they do business and adopt innovative technologies and solutions to increase their responsiveness and production efficiency Information technology plays an essential role in this process Current manufacturing systems are collections of complex systems or subsystems operating in distributed collaborative environments involving software hardware humans and organizations It is crucial to keep a balance between the technical aspects of automation and the human and social facets when applying information technology in industrial applications particularly with the rapid advancements in information and communication technologies and the wide deployment of automated manufacturing systems However in order to create appropriate frameworks for exploring the best synergies between humans and automated systems there are still numerous issues in terms of processes characterization modeling and development of adequate support tools BASYS conferences have been developed and organized to promote the development of balanced automation systems in an attempt to address these issues The first BASYS conference was successfully launched in Victoria Brazil 1995 and then the following conferences were held in Lisbon Portugal 1996 Prague Czech Republic 1998 Berlin Germany 2000 Cancun Mexico 2002 and Vienna Austria 2004 *Encyclopedia of Networked and Virtual Organizations* Putnik, Goran D., Cruz-Cunha, Maria Manuela, 2008-03-31 Administration r f rence lectronique informatique E-Business Models, Services and Communications Lee, In, 2007-11-30 With the rapid advancement in information technologies e business is rapidly growing in significance and is having a direct impact upon business applications and technologies E Business Models Services and Communications provides researchers and practitioners with valuable information on recent advances and developments in emerging e business models and technologies This book covers a variety of topics such as e business models telecommunication network utilization online consumer behavior electronic communication adoption and service provider strategies and privacy policies and implementation issues
