

Regulation of the Lactase

About This Worksheet

This worksheet complements the Click and Learn "Regulation of the Lactase Gene" developed in conjunction with the 2011 H. Author: Ann Brooker, Rocky River High School, OH.

Key Concepts

- Eukaryotic gene expression is regulated at the levels of transcription, RNA processing, translation, and post-translation.
- Proteins called transcription factors bind to DNA and control transcription. Different types of transcription factors can increase or decrease transcription.
- Mutations in DNA regions that control gene expression can alter the way genes are expressed.
- Infants have high lactase levels so that they can digest their mothers' milk, but lactase gene expression is turned off after weaning.
- Lactase persistence is the trait that allows adults to continue to digest milk. It results from a mutation in an enhancer region of the lactase gene.

Instructions

1. Go to BioInteractive.org.
2. In the menu bar under the masthead, mouse over Topics → Evolution → Interactive.
3. Scroll down the page and click on "Regulation of the Lactase Gene."
4. Proceed through the slides, watch the embedded video clips, and answer the following questions in the space provided.

Questions

1. What is the difference between lactose tolerance and lactose intolerance? Be specific.

✓ The difference between lactose tolerance and lactose intolerance is the ability of an individual to digest lactose milk in their body system. When you are a lactose tolerance most especially like infants, they have higher level of tolerance with milk because during this stage there is a higher production of lactase enzyme unlike to other people especially after weaning the production of lactase is stopped making them lactose intolerant.
2. Why is lactose tolerance also called lactase persistence?
✓ Lactose tolerance is also termed as a lactase persistence because the ability of a person to digest milk in their body is still remained allowing for the adults to continually digest milk even after their infancy.
3. In which cells or tissues is lactase produced and what is its role?
✓ Lactase are expressed and produced in the cells of small intestines. Lactase is an enzyme that breaks down the lactose in the organism.
4. What normally happens to the levels of lactase produced throughout a person's lifetime?
5. In general, why is it important for a cell to regulate protein production?
