Discovering World Religions at 24 Frames Per Second Julien R. Fielding, 2008-09-26 Traditionally university students have gained access to world religions by reading primary texts Discovering World Religions at 24 Frames Per Second takes students beyond the written page offering an exploration of the same religious traditions through the study of feature films The many definitions of religion are examined along with its various components including doctrine myth ethics ritual and symbol Specific religious traditions including Hinduism Sikhism Zoroastrianism Buddhism Confucianism Daoism popular religion and Shinto are examined Biographical sketches of directors whose films tend to focus on a particular religious tradition are also included such as Zhang Yimou Hayao Miyazaki Deepa Mehta and Akira Kurosawa Discovering World Religions at 24 Frames Per Second is unique in the area of religion and

film studies in that it isn't just a collection of essays. Instead, it provides the introductory student with the necessary background information on the various religions before looking at how their ideas can be understood not through texts but through the cinematic medium. To keep the conversation fresh, most of the films used in the book were made within the last decade. Furthermore, examples range from popular mainstream fare such as Star Wars and the Lord of the Rings trilogy to lesser known foreign films such as The Wooden Man's Bride and The Great Yokai War. Several films with a cult-like following are also discussed, including Fight Club, Princess Mononoke, Spirited Away, and Jacob's Ladder. This book is also unique in that, instead of drawing upon the Judeo-Christian tradition, it draws from Eastern traditions. Candle Grove James Reynold Riley, 2011-12-29. Why do teenagers keep disappearing in Potterfield? Is it the monsters rumored to be lurking in the forest? The ghost ship that plies the waters of the lake? Something sinister afoot in the halls of the abandoned mental hospital? Or hostile spirits roaming the ruins of the old burnt capitol building? Seven high school kids are about to learn these answers as they face the dangers of a town with more darkness than they ever imagined. And come to grips with a faith they had always taken for granted until now.

Algorithms and Models for the Web-Graph Stefano Leonardi, 2004-10-11. This volume contains the 14 contributed papers and the contribution of the distinguished invited speaker Béla Bollobás as presented at the 3rd Workshop on Algorithms and Models for the Web Graph WAW 2004 held in Rome, Italy, October 16, 2004, in conjunction with the 45th Annual IEEE Symposium on Foundations of Computer Science FOCS 2004. The World Wide Web has become part of our everyday life, and information retrieval and data mining on the Web is now of enormous practical interest. Some of the algorithms supporting these activities are based substantially on viewing the Web as a graph induced in various ways by links among pages, links among hosts, or other similar networks. The aim of the 2004 Workshop on Algorithms and Models for the Web Graph was to further the understanding of these Web-induced graphs and stimulate the development of high performance algorithms and applications that use the graph structure of the Web. The workshop was meant both to foster an exchange of ideas among the diverse set of researchers already involved in this topic and to act as an introduction for the larger community to the state of the art in this area. This was the third edition of a very successful workshop on this topic. WAW 2002 was held in Vancouver, Canada, in conjunction with the 43rd Annual IEEE Symposium on Foundations of Computer Science FOCS 2002, and WAW 2003 was held in Budapest, Hungary, in conjunction with the 12th International World Wide Web Conference WWW 2003. This was the first edition of the workshop with formal proceedings.
