Advances in Digital Technologies J. Mizera-Pietraszko, R. Rodriguez Jorge, D.M. Almazo Pérez, 2017-07-25 Web technology is ubiquitous in modern life enabling various forms of communication in real time between the users and computers as well as between network devices by means of artificial markup languages and cascading style sheets CSS Multimedia packages implemented in the WWW can also further expand the user groups to include for example the amblyopic or the hearing impaired According to Microsoft Web technology also encompasses Web servers and programming languages for building Web applications But such a breathtaking development that meets dynamically changing new emerging networking standards demands a large scale infrastructure that will enable us to access digital information in its every form whatever its purpose This book presents 20 papers and 3 keynote speeches from the 8th International Conference on Applications of Digital Information and Web Technologies ICADIWT 2017 held at the Universidad Autónoma de Ciudad Juárez City Chihuahua Mexico in March 2017 Over the years the ICADIWT conference has created its own research community of participants from many countries who attend the event each year to demonstrate and discuss their research findings The community is growing every year The scope of the ICADIWT 2017 conference covers a wide range of research areas and the papers in the book are divided into 7 subject areas pattern recognition distributed computing mobile technologies digital technologies for aerospace medical systems applications system engineering and control systems

Cellular and Molecular Biology of Intermediate Filaments R.D. Goldman, P.M. Steinert, 2013-06-29 Research activity on intermediate filaments IF has increased dramatically over the past decade For the most part this surge of interest is due to their identification as ubiquitous constituents of the cytoskeleton and karyoskeleton nuclear matrix of eukaryotic cells and the fact that we know very little regarding their functions In sharp contrast to the other major cytoskeletal systems microfilaments and microtubules IF exhibit a high degree of heterogeneity with regard to their protein subunit composition Indeed one can only marvel at the number of different IF polypeptides their associated proteins IFAP and consequently the number of genes involved in encoding the multiple constituents of the various IF networks found in different cell types The chapters in this book demonstrate how various experimental approaches involving cellular molecular biochemical and immunological methods have been utilized to generate information regarding the structure and function of IF To this end we have gathered together chapters from experts in the major fields of IF research In each chapter the authors

have combined reviews of the available scientific literature with their own ideas on current and future directions for IF research. The chapters have been divided into five major sections which are concerned with the subcellular organization of IF, the molecular structure of IF, the differential expression of IF genes, descriptions of associated proteins involved in the intracellular organization of IF, and finally an analysis of the changes seen in IF in pathological conditions.
