The Case for an International Banking Standard Morris Goldstein,1997-04-01 This study presents the case for an international banking standard IBS to deal with the rash of banking crises in developing countries Over the past 15 years almost three fourths of the IMF s member countries have experienced at least one serious bout of banking problems there have been at least a dozen developing country episodes where the costs of these crises amounted to

10 percent or more of the country's GDP and the total public sector resolution costs of developing country banking crises have been estimated to be 250 billion. Not only are these banking crises extremely costly to developing countries, they also pose increased risk to industrial countries. Morris Goldstein demonstrates that existing international agreements do not address the main sources of these crises and the adoption of a voluntary IBS offers a more attractive route to banking reform than the relevant alternatives. The study recommends minimum standards in eight key areas of banking supervision and addresses the operational issues associated with the design and implementation of an IBS.

Massively Parallel Globalization David C. Earnest, 2015-05-05 In this era of globalization, people organize into fluid adaptive networks to solve complex problems and provide resources that nation states cannot. Examples include the Grameen Bank, mHealth, and the Ushahidi open source software project. Why do these networks succeed where nation states fail? Only recently have social scientists developed tools to understand exactly how these complex networks self-organize, emerge, adapt, and solve collective problems. Three of these tools—agent-based modeling, social network analysis, and evolutionary computing—are converging in a field known as computational social science. In this provocative book, David C. Earnest discusses how computational social science helps us understand massively parallel globalization. Using explorations of global systems ranging from fisheries to banking, Earnest illustrates the promise of computer models for explaining the surprises, cascades, and complexity that characterize global politics today. These examples of massively parallel globalization contrast sharply with the hierarchical and inflexible governmental bureaucracies that are poorly suited to solve many of today's transnational and global challenges.
