MYSQL with Visual Basic and Visual C#
Vivian Siahaan, Rismon Hasiholan Sianipar, 2020-11-20 Book 1 This book aims to develop a MySQL driven desktop application that readers can develop for their own purposes to implement library project using Visual Basic NET In Tutorial 1 you will build a Visual Basic interface for the database This interface will used as the main terminal in accessing other forms This tutorial will also discuss how to create login form and login table You will create login form Place on the form one picture box two labels one combo box one text box and two buttons In Tutorial 2 you will build a school inventory project where you can store information about valuables in school The table will have nine fields Item description of the item Quantity Location where the item was placed Shop where the item was purchased DatePurchased when the item was purchased Cost how much the item cost SerialNumber serial number of the item PhotoFile path of the photo file of the item and Fragile indicates whether a particular item is fragile or not In Tutorial 3 you will perform the steps necessary to add 5 new tables using phpMyAdmin into Academy database You will build each table and add the associated fields as needed Every table in the database will need input form In this tutorial you will build such a form for Author table Although this table is quite simple only four fields AuthorID Name BirthDate and PhotoFile it provides a basis for illustrating the many steps in interface design SQL statement is required by the Command object to read fields sorted by Name Then you will build an interface so that the user can maintain the Publisher table in the database Academy The Publisher table interface is more or less the same as

Author table interface This Publisher table interface only requires more input fields So you will use the interface for the Author table and modify it for the Publisher table Book 2 In chapter one you will learn to know the properties and events of each control in a Windows Visual C application You need to learn and know in order to be more familiar when applying them to some applications in this book In chapter two you will go through step by step to build a SALES database using MySQL You will build each table and add associated data fields along with the necessary keys and indexes The first field in the Client table is ClientID Enter the client ID in the Name Field and select AutoNumber in the Data Type You define primary key and other indexes which are useful for quick searching ClientID is a primary field You will define FamilyName as an index You then will create Ordering table with three fields OrderID ClientID and OrderDate You then will create Purchase table with three fields OrderID ProductID and Quantity And you will create Product table with four fields ProductID Description Price and QtySold Before designing Visual C interface you will build the relationships between four tables The interface will be used to enter new orders into the database The order form will be used to enter the following information into the database order ID order date client ID client's first name and family name client's address product information ordered The form will have the ability to add new orders find clients add new clients The completed order invoice will be provided in a printed report In chapter three you will build a database management system where you can store information about valuables in your warehouse The table will have seven fields Item description of the item Location where the item was placed Shop where the item was purchased DatePurchased when the item was purchased Cost how much the item cost SerialNumber serial number of the item PhotoFile path of the photo file of the item and Fragile indicates whether a particular item is fragile or not The development of this Warehouse Inventory Project will be performed as usual in a step by step manner You will first create the database Furthermore the interface will be built so that the user can view edit add or add data records from the database Finally you add code to create a printable list of information from the database In chapter four you will build an application that can be used to track daily high and low pollutant PM2.5 and air quality level The steps that need to be taken in building Siantar Air Quality Index SAQI database project are Build and test a Visual C interface Create an empty database using code and Report database The designed interface will allow the user to enter max pollutant min pollutant and air quality for any date that the user chooses in a particular year This information will be stored in a database Graphical result of the data will be provided along with summary information relating to the maximum value minimum value and mean value You will use a tab control as the main component of the interface The control has three tabs one for viewing and editing data one for viewing graph of pollutant data and another for viewing graph of air quality data Each tab on this control operates like a Visual C control panel In chapter five you will perform the steps necessary to build a MySQL book inventory database that contains 4 tables You will build each table and add the associated fields as needed You will have four tables in the database and define the relationship between the primary key and foreign key You will associate AuthorID foreign key field in

the Title_Author table with AuthorID primary key in the Author table Then you want to associate the ISBN foreign key field in Title_Author table with ISBN primary key in the Title table
