The Value of Drawing Instruction in the Visual Arts and Across Curricula Seymour Simmons III,2021-03-29 By applying philosophical and historical perspectives to drawing instruction this volume demonstrates how diverse teaching methods contribute to cognitive and holistic development applicable within and beyond the visual arts Offering a new perspective on the art and science of drawing this text reveals the often unrecognized benefits that drawing can have on the human mind and thus

argues for the importance of drawing instruction despite and even due to contemporary digitalization. Given the predominance of visual information and digital media, visual thinking in and through drawing may be an essential skill for the future. As such, the book counters recent declines in drawing instruction to propose five Paradigms for teaching drawing as design, as seeing, as experience, and experiment as expression, and as a visual language, with exemplary curricula for pre-K12 art and general education, pre-professional programs across the visual arts, and continuing education. With the aid of instructional examples, this volume dispels the misconception of drawing as a talent reserved for the artistically gifted and posits it as a teachable skill that can be learned by all. This text will be of primary interest to researchers, scholars, and doctoral students with interests in drawing theory and practice, cognition in the arts, positive psychology, creativity theory, as well as the philosophy and history of arts education. Aligning with contemporary trends such as Design Thinking, STEAM, and Graphicacy, the text will also have appeal to visual arts educators at all levels and other educators involved in arts integration.

Learning to Draw Ann Bermingham, 2000. As early as the sixteenth century, drawing in England came to be seen as something more than an activity exclusive to artists; it became a polite and useful art, a practice of everyday life. This generously illustrated book explores the social and cultural processes that enabled drawing to emerge as an amateur pastime, as well as the meanings that drawing had for people who were not artists. Ann Bermingham shows how the history of drawing in England, from the age of Elizabeth I to the era of early photography, mirrored changes in society, politics, the practical world, and notions of self. The book examines how drawing intersected with a wide range of social phenomena, from political absolutism, writing, empirical science, and Enlightenment pedagogy to nationalism, industrialism, tourism, bourgeois gentility, and religious instruction. Bermingham discusses the central role of drawing and the visual arts in Renaissance debates about government and self-government, then considers the relations between seventeenth-century drawing, natural science, and the masculine ideal of the honest gentleman. She also investigates landscape drawing in the context of eighteenth-century views on sense.

Developing Visual Arts Education in the United States Mary Ann Stankiewicz, 2016-06-15. This book examines how Massachusetts Normal Art School became the alma mater par excellence for generations of art educators, designers, and artists. The founding myth of American art education is the story of Walter Smith, the school's first principal. This historical case study argues that Smith's students formed the professional network to disperse art education across the United States, establishing college art departments and supervising school art for industrial cities. As administrative progressives, they created institutions and set norms for the growing field of art education. Nineteenth-century artists argued that anyone could learn to draw; by the 1920s, every child was an artist whose creativity waited to be awakened. Arguments for systematic art instruction under careful direction gave way to charismatic artist teachers who sought to release artistic spirits. The task for art education had been redefined in terms of living the good life within a consumer culture of work and leisure.

Schulte, 2022-10-21 This book provides a revitalised account of the study of children's drawing by outlining a departure from existing approaches privileging developmentalist accounts and presenting drawing as a specialised human endeavour separated from other material entanglements constituting children's everyday experiences The book takes on current developments in the fields of early childhood arts and early childhood literacies to advocate for process oriented new materialist and decolonial approaches that re conceptualise the study of children's drawing It proposes a future oriented approach centred on thinking experimentally with a focus on nonrepresentational elements such as movement sensation intensity rhythm story and place which singularly assemble in drawing events Thus the book discusses drawing as a process of sense making that is not enclosed in the individualised body of the child and that unfolds corporeally in time and space It revises the relation of drawing with symbolisation by suggesting that the use of language and signs in drawing form in entanglement with matter and sensation in processes of creative speculation connected with the movement of thought Presenting a series of contributions by internationally recognised scholars and artists the book aims to create synergies between theory and practice that speak of everyday realities interconnecting children learning and sense making
