**Visualizing Earth Science with EarthPulse 2nd Edition** Set Zeeya Merali, 2010-12-04 [NASA SP-7500](#) United States. National Aeronautics and Space Administration, **Management**, 1990 **Management, a Bibliography for NASA Managers**, 1989 *The Geospatial Web* Arno Scharl, Klaus Tochtermann, 2009-02-28 The most important attribute of geospatial platforms is their unique potential to aggregate a multitude of public and private geographic data sets providing access to data from government agencies, industry, and the general public. NASA and other organizations have a wealth of planetary science data representing the output from thousands of satellites in earth orbit and from dozens of costly missions to other planets. Benefits derived from both the data and visual interfaces to access the data represent a significant return on investment for the public. Integrating geospatial data with semantic and collaborative Web technology multiplies the public benefits and represents the main focus of this book. The user interfaces of geobrowsers are designed for the layperson, giving convenient access to all kinds of geographically referenced information. Geobrowsers hide the technical details related to finding, accessing, and retrieving such information. The daunting challenge of the Geospatial Web is to seamlessly integrate and display vastly different information modes. Nowadays it is not enough to simply display a map of some region; additional dynamic information modes need to be displayed and put into context from weather sensor readings and live aerial video feeds to daily news updates, photo collections, and video archives.

**Realism and Space in the Novel, 1795-1869** Rosa Mucignat, 2016-04-01 Posing new questions about realism and the creative power of narratives, Rosa Mucignat takes a fresh look at the relationship between representation and reality. As Mucignat points out, worlds evoked in fiction all depend to a greater or lesser extent on the world we know from experience, but they are neither parasites on nor copies of those realms. Never fully aligned with the real world, stories grow out of the mismatch between reality and representation: those areas of the fictional space that are not located on actual maps but still form a fully structured imagined geography. Mucignat offers new readings of six foundational texts of modern Western culture: Goethe's *Wilhelm Meister's Apprenticeship*, Jane Austen's *Mansfield Park*, Alessandro Manzoni's *The Betrothed*, Stendahl's *The Red and the Black*, Charles Dickens's *Great Expectations*, and Gustave Flaubert's *Sentimental Education*. Using these texts as source material and supporting evidence for a new and comprehensive theory of space in fiction, she examines the links between the nineteenth-century novel's interest in creating substantial life-like worlds and contemporary developments in science, art, and society. Mucignat's book is an evocative analysis of the way novels marshal their technical and stylistic resources to produce imagined geographies so complex and engrossing that they intensify and even transform the reader's experience of real-life places.
